54 Alpha-amino-indole-3-acetic acids useful as anti-diabetic, anti-obesity and anti-atherosclerotic agents.

57 Provided are novel α -aminoindole-3-acetic acid derivatives having the formula

wherein R through R9 are the same as in Claim 1; and pharmacologically acceptable salts of compounds wherein R₉ is not OM, which are useful as anti-diabetic, anti-obesity and anti-atherosclerotic agents.

EP 0 375 133 A1

α -AMINO-INDOLE-3-ACETIC ACIDS USEFUL AS ANTI-DIABETIC, ANTI-OBESITY AND ANTI-ATHEROSCLEROTIC AGENTS**BACKGROUND OF THE INVENTION**

The present invention provides novel compounds. More particularly, the present invention provides novel α -amino-indole-3-acetic acids, tryptophans and their derivatives. The compounds are useful as anti-diabetic, anti-obesity and anti-atherosclerotic agents.

INFORMATION DISCLOSURE

10

α -Amino-indole-3-acetic acid, tryptophan and some of their derivatives are described in the literature. Thus, U.S. Patent 3,074,942 discloses α -amino-indole-3-acetic acid and derivatives thereof that are described as being useful as anaesthetics, CNS depressants and as antagonists to serotonin, acetylcholine and histamine. Some of these same compounds are disclosed in U.S. Patent 4,492,694, Baker, J.W., *Journal of Chemical Society*, 458 (1940); Casnati et al, *Gazz Chim. Ital.*, 93, 355 (1963); Dawes et al, *Nature*, 164, 705 (1949); Netherland published application 6,607,754; Armstrong et al, *J. Biol. Chem.*, 232, 17 (1958).

U.S. Patent 4,492,694 discloses acylated α -amino derivatives of α -amino-indole acetic acid.

U.S. Patent 3,320,280, Netherland application 6,415,318, U.S. Patent 3,316,260 and British patent 1,087,359 disclose α -(3-indolyl)lower aliphatic acid derivatives that contain a methyl substituent at the 2-position of the indole ring. Another feature of the compounds disclosed in 3,320,280 is the presence of an aromatic carboxylic acyl radical of less than three fused rings attached to the nitrogen atom of the indole ring.

U.S. Patent 3,000,888 and Biekert et al, *Ber.*, 97, 363 (1964) discloses an α -amino-indole-3-acetic acid derivative in which morpholino has been substituted for the α -amino group. It is described as being a therapeutic agent and an intermediate for preparing therapeutic agents.

German Offen. 2,345,775 and European patent application 7,615 published February 6, 1980 disclosed α -amino-indole-3-acetic acid derivatives having methyl and ethenyl substituents respectively, on α -carbon.

Yoneda, N., *Chem. Pharm. Bull.* 13, 1231 (1965); Kametani et al, *J. Heterocycl. Chem.*, 5, 799 (1968), French patent 1,100,016 and Yamada et al, *Chem. Pharm. Bull.*, 13, 88 (1965) disclose tryptophan derivatives in which one or both of the nitrogen atoms have been alkylated.

Preobrazhenskaya et al. *Khim. Geterotsikl. Soedin.*, 7, 778 (1971) discloses tryptophan derivatives wherein the carboxylic acid group has been replaced by a hydroxyl, alkoxyl or benzyloxy group.

To applicants' knowledge, tryptophan is the only indole α -amino acid for which blood sugar altering effects have been reported.

Tryptophan reduced blood sugar levels in normal rats but not in rats with severe alloxan diabetes. Mirsky et al, *Endocrinology*, 59, 369 (1956) and *Endocrinology*, 60, 318 (1957).

L-Tryptophan (2.5 mmoles/kg) administered i.p. to fasted rats blocked epinephrine-induced hyperglycemia 76%-89% and inhibited epinephrine-induced hyperglycemia to the same extent in both intact and diabetic rats indicating that insulin was not involved in preventing the hyperglycemic response. Sanders et al, *Pharmacology*, 6, 155 (1971).

Fasting blood glucose levels were not affected by intragastric administration (120 mg/rat) of DL-tryptophan to female rats. The rise in blood glucose following glucose ingestion (1 g/rat) was decreased by DL-tryptophan as compared with rats receiving glucose only. Szigeti et al, *Nahrung*, 13, 171 (1969).

It was reported that tryptophan administered through the stomach does not produce hyperglycemia. Bedo et al, *Egeszsegstudomány*, 13, 249 (1969).

Tryptophan facilitated deposition of glycogen, increased the liver weight, but decreased the pyruvate incorporation 7.5 times into liver glycogen. Lutkic et al, *Bull. Sci., Cons., Acad. Sci. Arts RSF Yougoslavie*, Sect. A., 18, 8 (1973).

The oral administration of 10 g L-tryptophan to healthy human subjects induced a small but significant rise in blood sugar, a slight increase in blood insulin, a marked increase in plasma glucagon, and delay d increase in plasma growth hormone. This contrasted with the reported hypoglycemic effect of tryptophan in rats and with the well-documented inhibition of gluconeogenesis by tryptophan and its metabolites in rat liver.

Since tryptophan increased the circulating glucagon in man, the elevated blood sugar was probably due to enhanced glycogenolysis and/or gluconeogenesis induced by this hormone. Hedo et al, *Metab., Clin. Exp.*, 26, 1131 (1977). Derwent 89-089908/12 refers to new tryptophan derivatives and their glycosides and their use to prevent or treat.

I.V. glucose tolerance was measured in rats fed various diets of defined L-tryptophan content. Within 14 days, animals which had been fed a tryptophan-deficient diet removed excess glucose from their blood at a reduced rate. The results suggest that dietary L-tryptophan is active in physiological regulation of carbohydrate metabolism. Wittman, J.S., *J. Nutr.*, 106, 631 (1976).

Among the amino acids, all stimulated the secretion of insulin and some were more active than insulin in inhibiting gluconeogenesis. The action of tryptophan on inhibiting gluconeogenesis was independent of its action on the secretion of insulin. Carrozza et al, *Boll. Soc. Ital. Bio. Sper.*, 47, 535 (1971).

Oral administration of tryptophan or lysine to rats 30 minutes prior to a subhypoglycemic i.v. injection of hypoglycin A resulted in a potent hypoglycemic effect. Tanaka et al, *Pan-Am. Assoc. Biochem. Soc. Symp.*, 3, 163 (1975).

The induction of hypoglycemia in both fed and 36 hour-starved rats by tryptophan (750 mg/kg, i.p.) was blocked by pretreatment with MK 486 or p-chlorophenylalanine (inhibitors of tryptophan decarboxylase and tryptophan 4-hydroxylase, respectively) and potentiated by paraglyline (monoamine oxidase inhibitor), suggesting the involvement of 5-hydroxytryptamine or a derivative thereof. I.P. administration of quinolate or indol-3-ylacetic acid to untreated rats or of tryptamine to pargyline-treated rats did not produce hypoglycemia. In pargyline-treated rats 5-hydroxytryptamine produced hyperglycemia, whereas 5-hydroxytryptophan had effects like those of tryptophan. The hypoglycemic response to tryptophan was prevented by the specific 5-hydroxytryptamine antagonist, methylsergide, and by experimental diabetes, and was enhanced by adrenalectomy. The response was also dependent on the presence of functional pancreatic β -cells, suggesting the involvement of insulin. Changes in liver metabolite and glucose concentrations were not related. The hypoglycemic action of tryptophan was associated with increased plasma β -hydroxybutyrate/acetoacetate ratios, indicating mediation through formation of intracellular 5-hydroxytryptamine. Smith et al, *Biochem. Soc. Trans.*, 4, 1049 (1976) and *Biochem. J.* 168, 495 (1977).

The mechanisms whereby tryptophan administration leads to hypoglycemia in some groups of rats but not others have been investigated. These results were discussed in relation to previous discrepancies in the literature, and a unifying hypothesis for tryptophan-induced hypoglycemia is proposed. Lloyd et al, *Biochem. Pharmacol.*, 31, 3563 (1982).

An increase in the rat hepatic level of gluconeogenic intermediates such as malate, aspartate, and citrate occurred after the i.p. administration of 10 mg L-tryptophan/100 g and was associated with 43 μ g liver content of its metabolite quinolinic acid/g liver. The clinical implication of these findings are discussed. McDaniel et al, *Diabetes*, 22, 713 (1973).

The addition of 2.4 mM tryptophan to the medium perfusing isolated rat livers inhibited glucose production from added alanine. Such livers retained the capacity for converting fructose to glucose. Veneziale et al, *Biochemistry*, 6, 2129 (1967).

For examination of the theory of Mirsky (CA 51, 576^d) that L-tryptophan shows hypoglycemic action because of its inactivation of the insulin-inhibiting enzyme of the liver, rats were given L-tryptophan 26 mg/100 g after 24 hours of fasting; another group was given tolbutamide 100 mg/100 g; another received both and a fourth was a control. Glycemia dropped with L-tryptophan, tolbutamide, and the mixture during 240 minutes. Butturini et al, *Minerva Med.*, 1497 (1958).

When given orally, L-tryptophan, DL-kynurenine, anthranilic acid, nicotinic acid, nicotinuric acid, indole-3-acetic acid, 5-hydroxytryptophan and 5-hydroxytryptamine creatinine sulfate produces a significant hypoglycemia in normal rats. Kynurenic acid produces a slight and nicotinamide a significant hyperglycemia. Quinolinic acid, picolinic acid, 5-hydroxyindoleacetic acid, indole, and skatole do not alter blood sugar levels. Indole-3-acetic acid and nicotinic acid do not reduce blood sugar levels in severely diabetic alloxanized rats. Mirsky et al, *Endocrinology*, 60, 318 (1957).

The minimum effective dose and the duration of the effect were determined for 37 substances (presumably including tryptophan) found to prevent alloxan diabetes. Okamoto, K., *Tohoku J. Exptl. Med.*, 61, Suppl. 3, 36 (1955).

The effect of DL-tryptophan on blood sugar levels was studied with normal males as subjects. Doses of 0.25, 0.50 and 1.0 g per day for 14 days failed to lower the blood sugar levels. In five of the eleven cases given 0.5 g per day, a significant increase was noted. An attempt was made to pick up a transient effect of tryptophan on blood sugar levels one to three hours after ingestion, but no effect was found. Howard and Modlinger, *Am. J. Physiol.*, 153, 425 (1948).

The intravenous injection of 90 cg tryptophan dissolved in 70 cc H₂O did not produce hyperglycemia or

metabolic changes in normal vs. diabetic individuals. It did produce a slight increase in the alk. reserve. The intravenous injection of 5 g tyrosine dissolved in 120 cc H₂O or in normal serum or the oral administration of 2 g tyrosine showed no hypoglycemia action in diabetes. Barone et al, Bull. Soc. Ital. Soc. Sper. 6, 834 (1931).

5 The compounds of the present invention are able to reduce blood glucose in severely insulin resistant mice. The major effect is on postprandial glucose concentrations indicating that the major effect may not be on inhibition of gluconeogenesis as has been suggested as a major mechanism for tryptophan-induced hypoglycemia in the preceding paragraphs. Although it has been hypothesized that metabolites of tryptophan might effect a decrease in fed glucose concentrations in normal rats and mice by a different
10 mechanism (Smith and Pogson, Biochemical J., 168, 495 (1977)), neither tryptophan, 5-fluoro-tryptophan, nor 5-benzoyl-tryptophan at a dose of 100 mg/kg were effective in the insulin resistant model wherein the present invention was discovered. As some tryptophan analogs were effective in lowering fed blood glucose levels in this insulin resistant model, it is possible that extremely large amounts of tryptophan itself might give rise to a similar effect.

SUMMARY OF THE INVENTION

20 This invention relates to methods of preventing and treating diabetes, atherosclerosis and obesity in animals, including humans by administering a compound of formula I wherein R is

- (a) hydrogen,
- (b) C₁-C₁₀ alkyl,
- 25 (c) C₂-C₁₀ alkenyl,
- (d) C₃-C₁₀ alkynyl,
- (e) phenyl,
- (f) -C(R₆)H-phenyl(-R₅)_b,
- (g) -SO₂-phenyl(-R₅)_b,
- 30 (h) -C(O)R₁,
- (i) -C(O)OR₃,
- (j) -(CH₂)_aN(R₇)(R₈),
- (k) -C(O)N(R₇)(R₈),
- (l) - (CH₂)_m Het,
- 35 (m) -CH₂C(O)R₄,
- (n) -(CH₂)_mO(CH₂)_mCH₃,
- (o) -CH₂-(C₃-C₆)cycloalkyl,
- (p) C₃-C₈ cycloalkyl, wherein a is 1 to 4,

b is 1 to 5,

40 m is 1 or 2,

n is 0 or 1,

p is 4 or 5,

q is 2 or 3,

wherein M is a pharmacologically acceptable cation;

45 wherein R₁ is

- (a) hydrogen,
- (b) C₁-C₁₀ alkyl,
- (c) C₂-C₁₀ alkenyl,
- (d) C₂-C₁₀ alkynyl,
- 50 (e) -phenyl(-R₅)_b,
- (f) -CH₂-phenyl(-R₅)_b; wherein R₂ is
- (a) -CH(R₆)-phenyl(-R₅)_b;
- (b) -CH₂- Het,
- (c) C₁-C₆ alkyl

55 (d) -CH₂)_b-phenyl(-R₅)_b wherein het is a 5- or 6-membered saturated or unsaturated ring containing from one to three heteroatoms (nitrogen, oxygen, sulfur); and including any bicyclic group in which any of the above heterocyclic rings is fused to a benzene ring or another heterocycle; wherein R₃ is

- (a) hydrogen,
 (b) $-C(O)R_1$,
 (c) $-C(O)OR_1$,
 (d) $-(CH_2)_b$ -phenyl(R_5)_b wherein R_4 is
- 5 (a) hydrogen,
 (b) $-C(O)R_5$ wherein R_5 same or different is
 (a) hydrogen,
 (b) halogen,
 (c) hydroxy,
 10 (d) C_1 - C_{10} alkoxy,
 (e) C_3 - C_{10} alkenyloxy,
 (f) C_3 - C_{10} alkynyloxy,
 (g) nitro,
 (h) amino,
 15 (i) $-N(R_6)(R_7)$,
 (j) $-NHC(O)R_1$,
 (k) $-OC(O)R_1$,
 (l) $-C(O)R_1$,
 (m) trifluoromethyl,
 20 (n) $-SO_2N(R_6)(R_7)$,
 (o) $-SR_8$,
 (p) $-C\equiv N$,
 (q) $-C(O)OR_6$,
 (r) C_1 - C_4 alkyl
 25 (s) phenyl
 (t) $-O-CH_2-O-$, wherein R_6 is
 (a) hydrogen,
 (b) C_1 - C_{10} alkyl,
 (c) $-C(O)OR_1$,
 30 (d) phenyl, wherein R_7 is
 (a) hydrogen,
 (b) C_1 - C_{10} alkyl, wherein R_8 is
 (a) hydrogen,
 (b) C_1 - C_{10} alkyl,
 35 (c) C_3 - C_{10} alkenyl,
 (d) C_3 - C_{10} alkenyl,
 (e) phenyl- $(R_5)_b$,
 (f) $-CH_2$ -phenyl- $(R_5)_b$,
 (g) CH_2 -het, and
 40 wherein R_9 is
 (a) hydrogen,
 (b) hydroxy,
 (c) OM,
 (d) $-OR_8$,
 45 (e) $-N(R_6)(R_7)$, and pharmacologically acceptable salts of compounds wherein R_9 is not OM;
 with the proviso that when n is 0, R_2 is benzyl, substituted benzyl or alkyl, R is hydrogen, benzyl or substituted benzyl, R_1 is hydrogen or methyl, R_3 is hydrogen or methyl, R_5 is hydrogen, benzyloxy or methoxy, and R_6 is hydrogen, then R_4 cannot be benzyloxycarbonyl, ethoxycarbonyl, or $C(O)OM$;
 with the further proviso that when n is 1; R is hydrogen or methyl; R_1 is hydrogen; R_2 is benzyl; R_3 is
 50 hydrogen, R_5 is hydrogen; and R_6 is hydrogen, then R_4 cannot be carboxyl or methoxycarbonyl;
 with the further proviso that when n is 0; R is hydrogen or 4-substituted benzyl; R_1 is hydrogen or methyl;
 R_2 is C_1 - C_4 alkyl; R_3 is hydrogen or C_1 - C_2 alkyl; R_5 is hydrogen, methoxy, or benzyloxy; and R_6 is
 hydrogen, then R_4 cannot be ethoxycarbonyl, carboxyl, or propoxycarbonyl;
 with the further proviso that the compound of Formula I is not:
 55 Methyl α -[N-methyl-N-3-(trifluoromethyl)benzylamino]-1-benzylindole-3-acetate,
 Methyl α -[N-methyl-N-3-(trifluoromethyl)benzylamino]-1-benzylindole-3-acetate hydrochloride,
 Methyl α -[N-methyl-N-3-(trifluoromethyl)benzylamino]-1-benzylindole-3-acetate acid,
 Methyl α -[3-(trifluoromethyl)benzylamino]indole-3-acetate hydrochloride.

- Ethyl α -[3-(trifluoromethyl)benzylamino]indole-3-acetate hydrochloride,
 α -[3-(trifluoromethyl)benzylamino]-1-benzylindole-3-acetic acid *p*-phenylphenacyl ester,
 α -[3-(trifluoromethyl)benzylamino]-1-benzylindole-3-acetic acid 1-methyl-3-butenyl ester,
 2-[3-(trifluoromethyl)benzylamino]-2-(1-benzyl-3-indolyl)ethanol,
 5 Methyl α -[3-(trifluoromethyl)benzylamino]-1-acetoxymethylindole-3-acetate,
 Methyl α -[3-(trifluoromethyl)benzylamino]-1-acetoxymethylindole-3-acetate hydrochloride,
 Methyl α -(benzylamino)-1-indole-3-acetate,
 α -(phenylpropylamino)-1-benzylindole-3-acetic acid,
 Methyl α -[4-(aminosulfonyl)phenylethylamino]-indole-3-acetate,
 10 α -Methylamino-1-benzylindole-3-acetic acid,
 α -(Phenylethylamino)-1-benzylindole-3-acetic acid,
 α -[4-(aminosulfonyl)phenylethylamino]-1-benzylindole-3-acetic acid,
 α -[(tetrahydro-2-furanyl)methylamino]-1-benzylindole-3-acetic acid,
 α -[3-(trifluoromethyl)benzylamino]-1-benzylindole-3-acetic acid *N,N*-dimethylamide,
 15 Ethyl α -[3-(trifluoromethyl)benzylamino]-indole-3-acetate,
 α -[(2-furylmethyl)amino]-indole-3-acetic acid,
 α -benzylamino-indole-3-acetic acid,
 α -[3-(trifluoromethyl)benzylamino]-1-benzylindole-3-acetic acid amide,
 α -[4-(methoxycarbonyl)benzylamino]-1-benzylindole-3-acetic acid,
 20 Methyl α -[3-(trifluoromethyl)benzylamino]-1-acetoxymethylindole-3-acetate,
 Methyl α -[3-(trifluoromethyl)benzylamino]-1-acetoxymethylindole-3-acetate hydrochloride.

The compounds of this invention are useful as anti-diabetic, anti-obesity and anti-atherosclerotic agents.

- The compounds of this invention may be supplied in capsules, tablets, suppositories, powders, or as fluid solutions and/or suspensions in aqueous or non-aqueous vehicles or can be added to food. The compounds can be administered orally, intravenously, intramuscularly, intra-arterially, intraperitoneally, subcutaneously, sublingually, buccally to man or to other animals. The dosage of each of the uses is about 0.1-50 mg/kg. The dosage will vary with the route of administration and the physical state of the recipient. Also, for example, the dosage by the oral route will depend on the frequency of administration and the weight of the recipient.

- Without further elaboration, it is believed that one skilled in the art can, using the preceding description, practice the present invention to its fullest extent. The following detailed examples describe how to prepare various compounds of the invention and are to be construed as merely illustrative, and not limitations of the preceding disclosure. Those skilled in the art will promptly recognize appropriate variations from the procedures both as to reactants and as to reaction conditions and techniques.

- Preferred compounds are those of formula I wherein R is hydrogen or benzyl, R₁ is hydrogen, R₂ is trifluoromethylbenzyl or furylmethyl and R₃ is selected from the group consisting of hydroxy, OR_a and OM wherein R_a is C₁-C₁₀ alkyl and M is a pharmacologically acceptable cation and their preferred utility is as anti-diabetic agents. Particularly preferred are the compounds α -[3-(trifluoromethyl)benzylamino]-1-benzylindole-3-acetic acid, methyl α -[3-(trifluoromethyl)benzylamino]-1-benzylindole-3-acetate hydrochloride, α -[3-(trifluoromethyl)benzylamino]-indole-3-acetic acid, α -[(2-furylmethyl)amino]-1-benzylindole-3-acetic acid, α -[3-(trifluoromethyl)benzylamino]-1-benzyl-5-methoxyindole-3-acetic acid, α -[3-(trifluoromethyl)benzylamino]-1-benzyl-6-chloro-5-methoxyindole-3-acetic acid, and α -[3-(trifluoromethyl)benzylamino]-1-benzyl-6-methyl-5-methoxyindole-3-acetic acid.

- The carbon atom content of various hydrocarbon-containing moieties is indicated by a prefix designating the minimum and maximum number of carbon atoms in the moiety, i.e., the prefix (C_i-C_j) indicates a moiety of the integer "i" to the integer "j" carbon atoms, inclusive. Thus (C₁-C₄)alkyl refers to alkyl of one to 4 carbon atoms, inclusive, or methyl, ethyl, propyl, butyl, and isomeric forms thereof. C₄-C₇ cyclic amino indicates a monocyclic group containing one nitrogen and 4 to 7 carbon atoms.

- Examples of (C₃-C₁₀)cycloalkyl which include alkyl-substituted cycloalkyl containing a total of up to 10 total carbon atoms, are cyclopropyl, 2-methylcyclopropyl, 2,2-dimethylcyclopropyl, 2,3-diethylcyclopropyl, 2-butylcyclopropyl, cyclobutyl, 2-methylcyclobutyl, 3-propylcyclobutyl, cyclopentyl, 2,2-dimethylcyclopentyl, cyclohexyl, cycloheptyl, cyclooctyl, cyclononyl, cyclodecyl and isomeric forms thereof.

- Examples of aryl include phenyl, naphthyl, (o-, m-, p-)tolyl, (o-, m-, p-)ethylphenyl, 2-ethyl-tolyl, 4-ethyl-o-tolyl, 5-ethyl-m-tolyl, (o-, m-, or p-)propylphenyl, 2-propyl-(o-, m-, or p-)tolyl, 4-isopropyl-2,6-xylyl, 3-propyl-4-ethylphenyl, (2,3,4- 2,3,6-, or 2,4,5-)trimethylphenyl, (o-, m-, or p-)fluorophenyl, (o-, m-, or p-)trifluoromethylphenyl, 4-fluoro-2,5-xylyl, (2,4-, 2,5-, 2,6-, 3,4-, or 3,5-)difluorophenyl, (o-, m-, or p-)chlorophenyl, 2-chloro-p-tolyl, (3-, 4-, 5- or 6-)chloro-o-tolyl, 4-chloro-2-p-xylylphenyl, 2-isopropyl-4-chlorophenyl, 4-chloro-3-fluorophenyl, (3- or 4-)chloro-2-fluorophenyl, (o-, m-, or p-)trifluoro-methylphenyl,

(o-, m-, or p-)ethoxyphenyl, (4- or 5-)chloro-2-methoxy-phenyl, and 2,4-dichloro-(5- or 6-)methylphenyl, and the like.

Examples of -Het include: 2-, 3-, or 4-pyridyl, imidazolyl, indolyl, N^m-formyl-indolyl, N^m-C₁-C₅alkyl-C(O)-indolyl, [1,2,4]triazolyl, 2-, 4-, or 5-pyrimidinyl, 2- or 3-thienyl, piperidinyl, pyrrol, pyrrolinyl, pyrrolidinyl, pyrazolyl, pyrazolinyl, pyrazolidinyl, imidazolyl, imidazolidinyl, pyrazinyl, piperazinyl, pyridazinyl, oxazolyl, oxazolidinyl, isoxazolyl, isoxazolidinyl, morpholinyl, thiazolyl, thiazolidinyl, isothiazolyl, isothiazolidinyl, quinolinyl, isoquinolinyl, benzimidazolyl, benzofuryl, benzothiazolyl, benzoxazolyl, furyl, thienyl, phthalimidyl, and benzothienyl. Each of these moieties may be substituted benzofuran as noted above.

As would be generally recognized by those skilled in the art of organic chemistry, a heterocycle as defined herein for -Het would not be bonded through oxygen or sulfur or through nitrogen which is within a ring and part of a double bond.

Halo is halogen (fluoro, chloro, bromo, or iodo) or trifluoromethyl. Examples of pharmaceutically acceptable acid addition salts include: acetate, adipate, alginate, aspartate, benzoate, benzenesulfonate, bisulfate, butyrate, citrate, camphorate, camphorsulfonate, cyclopentanepropionate, digluconate, dodecylsulfate, enthanesulfonate, fumarate, glucoheptanoate, glycerophosphate, hemisulfate, heptanoate, hexanoate, hydrochloride, hydrobromide, hydroiodide, 2-hydroxyethanesulfonate, lactate, maleate, methanesulfonate, 2-naphthalenesulfonate, nicotinate, oxalate, palmoate, pectinate, persulfate, 3-phenylpropionate, picrate, pivalate, propionate, succinate, tartrate, thiocyanate, tosylate, and undecanoate.

Examples of pharmaceutically acceptable cations include: pharmacologically acceptable metal cations, ammonium, amine cations, or quaternary ammonium cations. Especially preferred metal cations are those derived from the alkali metals, e.g., lithium, sodium, and potassium, and from the alkaline earth metals, e.g., magnesium and calcium, although cationic forms of other metals, e.g., aluminum, zinc, and iron are also within the scope of this invention. Pharmaceutically acceptable amine cations are those derived from primary, secondary, or tertiary amines.

EMBODIMENTS OF THE INVENTION

The α -amino-indole-3-acetic acids and their derivatives wherein n is 0 can be prepared by condensing an indole unsubstituted at the 3-position with glyoxylic acid or esters thereof and a primary or secondary amine. Reactions of this type are described in U.S. patent 3,074,942, the essential parts which are incorporated herein by reference and are illustrated in Charts I and II. A preferred method involves adding 1.1 equivalents of glyoxylic acid monohydrate to a solution of 1.0 equivalent of an appropriate indole and one equivalent of the appropriate amine. The resulting solution is allowed to stand overnight and then the separated solid is collected by filtration, washed with methanol and dried to obtain the desired product.

Compounds wherein n = 1 can be prepared from tryptophan and its known derivatives.

Compounds of this invention having a migrated carboxy group, I', can be prepared by the process illustrated in Chart III. In this process an indole-3-carboxyaldehyde is reacted with an amine such as methylphenylglycinate hydrochloride in the presence of a solvent. The ratio of amine to aldehyde is about 3 to 1 and the reaction is conducted at a temperature of about 25° to about 40° for a period of about 24 hours to about 72 hours.

The starting materials utilized to prepare the compounds of this invention are either commercially available or can be prepared by methods well known in the art. For example, see K. Sukata, Bull. Chem. Soc., Japan, 56, 280 (1982). Khan et al, Chem. Pharm. Bull., 25, 3110 (1970), discloses a procedure for preparing 1-phenylindole; 1-benzyl-2-phenylindole was prepared by Suvorou et al, J. Org. Chem., USSR, 16, 766 (1980) by the Fischer indole synthesis. Ehrhart et al, Arch. Pharm., 294, 550 (1961) disclosed a process for preparing 1-benzyl-5-methoxyindole, 1-benzyl-5-chloroindole and 1-benzyl-2-methoxyindole and 1-benzyl-5-fluoroindole. Rubottom et al., Org. Syn., 54, 60 (1974) discloses a process for preparing 1-allylindole. Kelly et al, Synthesis, 544 (1972) discloses a process for preparing methyl glyoxylate.

DESCRIPTION OF THE PREFERRED EMBODIMENTS

Preparation 1 1-Benzylindole

To a stirred mixture of sodium amide (prepared from 19.6 g, 0.85 mole of sodium and a few mg of Fe-(NO₃)₃·9H₂O) and 800 mL of liquid NH₃ (a dry ice condenser was used) was added a solution of 100 g (0.85 mole) of indole in 250 mL of dry ether during 15 minutes. The mixture was stirred for 30 minutes and then a solution of 107.8 g (0.85 mole) of benzyl chloride in 100 mL of dry ether was added during 30 minutes. The ammonia was allowed to evaporate overnight. The sides of the flask were washed down with MeOH and then 500 mL of H₂O was added. The mixture was extracted with ether (2x500 mL). The combined ether extracts were washed with 250 mL of H₂O and dried over MgSO₄. The solvent was evaporated. The residue was distilled at 2 mm: fr I, b.p. 172-183°, fr II, b.p. 183-186°, 5 g; fr III, b.p. 186-187°, 10.9 g; fr IV, b.p. 187-191°, 121.8 g; fr V, b.p. 191-197°, 13.9 g. Fractions III-V solidified upon standing several hours. Fraction IV had m.p. 42-43°. Fraction III was crystallized from aqueous MeOH giving 9.9 g of colorless needles, m.p. 42.5-43.5°. Fraction V was crystallized from aqueous MeOH giving 11.6 g of colorless needles, m.p. 43-45.5°. The total yield was 143.3 g (81.5%).

Preparation 2 1-(4-Chlorobenzyl)indole

A mixture of 11.72 g (0.1 mole) of indole, 17.71 g (0.11 mole) of 4-chlorobenzyl chloride, 33 g (0.5 mole) of 85% KOH, 14 mL of H₂O, 2.5 g (2.5 mmoles) of PEG-1000 and 100 mL of toluene was stirred and heated at 55-60° for 22 hours. After cooling to room temperature, 50 mL of H₂O was added. The layers were separated. The aqueous layer was extracted with 100 mL of toluene. The combined organic phases were washed with 2N HCl (2x50 mL), H₂O (2x50 mL), and 50 mL of brine and dried over MgSO₄. Evaporation of the solvent left 29 g of orange-brown oil. The oil was chromatographed on a 1100 g column of silica gel. The column was eluted with 1:1 CH₂Cl₂-Skellysolve B and 200 mL fractions were collected. The fractions were assayed by silica gel tlc (1x4") 25% CH₂Cl₂-Skellysolve B. Fractions 12-19 were combined giving 23.11 g of crude product as a pink oil. The oil was chromatographed on a 1100 g column of silica gel. The column was eluted with 25% CH₂Cl₂-Skellysolve B and 200 mL fractions were collected. The fractions were assayed as before. Fractions 20-30 were combined giving 20.33 g (84%) of 1-(4-chlorobenzyl)indole as a yellow oil.

Physical characteristics are as follows:

NMR (CDCl₃): δ 5.22 (s, 2H), 6.6 (d, J=3Hz, 1H), 6.9-7.4 (m, 8H), 7.57-7.8 (m, 1H).

Preparation 3 1-Phenylindole

A mixture of 17.57 g (0.15 mole) of indole, 23.55 g (0.15 mole) of bromobenzene, 21 g of anhydrous potassium carbonate, 0.75 g of CuO, and 30 mL of DMF was stirred and heated under reflux for 43 hours. The cooled mixture was diluted with 200 mL of H₂O and extracted with 150 mL of ether. The extract was washed with H₂O (2x50 mL) and 50 mL of brine and dried over MgSO₄. Evaporation of the solvent left 35.7 g of brown oil. The oil was chromatographed on a 1100 g column of silica gel. The column was eluted with 25% CH₂Cl₂-Skellysolve B and 200 mL fractions were collected. The fractions were assayed by silica gel tlc (1x4") (25% CH₂Cl₂-Skellysolve B). Fractions 15-22 were combined giving 5.86 g (20%) of 1-phenylindole as a yellow oil.

Physical characteristics are as follows:

NMR (CDCl₃): δ 6.7 (d, J=3Hz, 1H), 7.1-7.9 (m, 10H).

Preparation 4 1-Benzyl-2-phenylindole and 1,3-Dibenzyl-2-phenylindole

A mixture of 19.33 g (0.1 mole) of 2-phenylindole, 13.92 g (0.11 mole) of benzyl chloride, 33 g (0.5 mole) of 85% KOH, 14 mL of H₂O 2.5 g (2.5 mmoles) of PEG-1000, and 100 mL of toluene was stirred and heated at 55-60° for 24 hours. After cooling to room temperature, 100 mL of H₂O was added. The layers were separated. The aqueous layer was extracted with 100 mL of toluene. The combined toluene phases were washed with 2N HCl (2x50 mL), H₂O (2x50 mL), and 50 mL of brine and dried over MgSO₄. Evaporation of the solvent left 32.3 g of dark brown oil. The oil was chromatographed on a 1100 g column of silica gel. The column was eluted with 25% CH₂Cl₂-Skellysolve B and 200 mL fractions were collected. The fractions were assayed by silica gel tlc (1x4") (25% CH₂Cl₂-Skellysolve B). Fractions 18-20 were combined giving 3.74 g (13%) of 1-benzyl-2-phenylindole as a solid.

Physical characteristics are as follows:

NMR (fr 19) (CDCl_3): δ 5.38 (s, 2H), 6.7 (s, 1H), 7.0-7.9 (m, 14H).

Fractions 21-25 were combined giving 10.38 g of a mixture of 1-benzyl-2-phenylindole and 1,3-dibenzyl-2-phenylindole as a pale yellow oil which partially solidified upon standing.

Physical characteristics are as follows:

5 NMR (fr 28) (CDCl_3): δ 4.1 (s, 2H), 5.28 (s, 2H), 6.9-7.6 (m, 19H).

Preparation 5 1-Benzyl-5-methoxyindole and 1,3-Dibenzyl-5-methoxyindole

10 A mixture of 5 g (33.97 mmol) of 5-methoxyindole, 4.73 g (37.37 mmol) of benzyl chloride, 11.2 g (170 mmol) of 85% KOH, 5 mL of H_2O , 0.83 g (0.83 mmol) of PEG-1000, and 50 mL of toluene was stirred and heated at 55-60° for 21 hours. After cooling to room temperature, 100 mL of H_2O was added. The layers were separated. The aqueous layer was extracted with 100 mL of toluene. The combined toluene phases were washed with 2N HCl (2x50 mL), H_2O (2x50 mL), and 50 mL of brine and dried over
15 MgSO_4 . Evaporation of the solvent left 9.86 g of brown oil. The oil was chromatographed on a 400 g column of silica gel. The column was eluted with 1:1 CH_2Cl_2 -Skellysolve B and 100 mL fractions were collected. The fractions were assayed by silica gel TLC (2x8") (1:1 CH_2Cl_2 -Skellysolve B). Fraction 15 contained 0.78 g of a mixture of 1-benzyl-5-methoxyindole and 1,3-dibenzyl-5-methoxyindole as an oil.

Physical characteristics are as follows:

20 NMR (fr 15) (CDCl_3): δ 3.78 and 3.88 (s, 3H), 4.1 (s, 1H), 5.2 and 5.28 (s, 2H), 6.51 (d, J = 3Hz, <1H), 6.77-7.4 (m, 9.5H).

Fraction 16 was crystallized from CH_2Cl_2 -Skellysolve B giving 1.49 g of 1-benzyl-5-methoxyindole as a white solid. Fractions 17-27 were combined giving 4.44 g of 1-benzyl-5-methoxyindole as a white solid. The total yield of 1-benzyl-5-methoxyindole was 5.93 g (74%).

25 Physical characteristics are as follows:

NMR (fr 22) (CDCl_3): δ 3.8 (2, 3H), 5.25 (s, 2H), 6.5 (d, J = 3Hz, 1H), 6.8-7.4 (m, 9H).

Preparation 6 1-Benzyl-5-chloroindole

30 To a solution of 0.8 g (3.03 mmol) of 18-crown-6 in 100 mL of dry ether was added 4.39 g (39.12 mmol) potassium tert-butoxide. The mixture was stirred while 5.08 g (33.51 mmol) of 5-chloroindole was added. The stirring was continued for 0.5 hour. Most of the solid dissolved. Then 6.69 g (39.11 mmol) of benzyl bromide in 40 mL of ether was added during 0.5 hour. The stirring was continued for 27
35 hours. Water (100 mL) was added. The layers were separated. The aqueous layer was extracted with ether (2x75 mL). The combined ether phases were washed with 50 mL of brine and dried over MgSO_4 . Evaporation of the solvent left 9.17 g of orange oil. The oil was chromatographed on a 700 g column of silica gel. The column was eluted with 1:2 CH_2Cl_2 -Skellysolve B and 200 mL fractions were collected. The fractions were assayed by silica gel TLC (2x8") (1:2 CH_2Cl_2 -Skellysolve B). Fractions 10-14 were combined
40 giving 7.26 g (90%) of 1-benzyl-5-chloroindole as a yellow oil.

Physical characteristics are as follows:

NMR (fr 10) (CDCl_3): δ 4.06 (s, trace), 5.28 (s, 2H), 6.52 (d, J = 3Hz, 1H), 7.02-7.58 (m, 8H), 7.63-7.73 (m, 1H).

45

Preparation 7 1-Benzyl-2-methylindole and 1,3-dibenzyl-2-methylindole

A mixture of 13.11 g (0.1 mole) of 2-methylindole, 13.92 g (0.11 mole) of benzyl chloride, 33 g (0.5 mole) of 85% KOH, 14 mL of H_2O , 2.5 g (2.5 mmol) of PEG-1000, and 100 mL of toluene was stirred and
50 heated at 60° for 23 hours. After cooling to room temperature, 100 mL of H_2O was added. The layers were separated. The aqueous layer was extracted with 100 mL of toluene. The combined toluene phases were washed 2N HCl (2x50 mL), H_2O (2x50 mL), and 50 mL of brine and dried over MgSO_4 . Evaporation of the solvent left 26.98 g of dark brown oil. The oil was chromatographed on a 1100 g column of silica gel. The column was eluted with 25% CH_2Cl_2 -Skellysolve B and 200 mL fractions were collected. The fractions were
55 assayed by silica gel TLC (1x4") (25% CH_2Cl_2 -Skellysolve B). Fractions 20-22 were combined giving 2.08 g (9%) of 1-benzyl-2-methylindole as a yellow oil which solidified.

Physical characteristics are as follows:

NMR (fr 22) (CDCl_3): δ 2.32 (s, 3H), 5.23 (s, 2H), 6.2-6.6 (br, 1H), 6.9-7.42 (m, 7H), 7.5-7.78 (m, 2H).

Fractions 23-28 were combined giving 7.50 g of yellow oil consisting of 1-benzyl-2-methylindole and 1,3-dibenzyl-2-methylindole.

Physical characteristics are as follows:

NMR (fr 33)(CDCl₃): δ 2.29 (s, 3H), 4.09 (s, 2H), 5.23 (s, 2H), 6.88-7.58 (m, 14H).

Preparation 8 1-Benzyl-2-methylindole and 1,3-dibenzyl-2-methylindole

To a solution of 2.39 g (9.04 mmoles) of 18-crown-6 in 250 mL of dry ether was added 13.1 g (116.7 mmoles) of potassium tert-butoxide. The mixture was stirred while 13.11 g (100 mmoles) of 2-methylindole was added. The stirring was continued for 0.5 hour. Most of the solid dissolved. Then 20 g (116.9 mmoles) of benzyl chloride in 120 mL of ether was added during 45 minutes. The stirring was continued for 21.5 hours. Water (200 mL) was added. The layers were separated. The aqueous layer was extracted with ether (2x75 mL). The combined ether phases were washed with 50 mL of brine and dried over MgSO₄. Evaporation of the solvent left 25.85 g of dark brown oil. The oil was chromatographed on a 1100 g column of silica gel. The column was eluted with 25% CH₂Cl₂-Skellysolve B and 200 mL fractions were collected. The fractions were assayed by silica gel tlc (1x4") (25% CH₂Cl₂-Skellysolve B). Fractions 22-25 were combined giving 2.28 g (10%) of slightly impure 1-benzyl-2-methylindole as a pale yellow oil which solidified upon standing. Fractions 26-35 were combined giving 8.42 g of 1-benzyl-2-methylindole and 1,3-dibenzyl-2-methylindole as a pale yellow oil. The 8.42 g was combined with the 7.50 g of a similar mixture from fractions 23-38, and chromatographed on a 1100 g column of silica gel. The column was eluted with 25% CH₂Cl₂-Skellysolve B and 200 mL fractions were collected. The fractions were assayed as before. Fractions 21-24 were combined giving 3.59 g of 1-benzyl-2-methylindole as a pale yellow oil which solidified. Fractions 25-30 were combined giving 7.66 g of a mixture of 1-benzyl-2-methylindole and 1,3-dibenzyl-2-methylindole as an oil.

Preparation 9 1-Allylindole

To a solution of 2.39 g (9.04 mmoles) of 18-crown-6 in 250 ml of dry ether was added 13.1 g (116.7 mmoles) of potassium tert-butoxide. The mixture was stirred while 11.72 g (100 mmoles) indole was added. The stirring was continued for 3 hours. All of the solid did not dissolve. Then 14.1 g (116.5 mmoles) of allyl bromide in 100 ml of ether was added during 0.5 hour. The stirring was continued for 67.5 hours. Water (200 ml) was added. The layers were separated. The aqueous layer was extracted with ether (2 x 75 ml). The combined ether phases were washed with 50 ml of brine and dried over MgSO₄. Evaporation of the solvent left 16.02 g of brown oil. The oil was chromatographed on a 1100 g column of silica gel. The column was eluted with 10% acetone-Skellysolve B and 200 ml fractions were collected. The fractions were assayed by silica gel tlc (1 x 4") (10% acetone-Skellysolve B). Fractions 17-23 were combined giving 11.60 g (74%) of 1-allylindole as a yellow-brown oil.

Physical characteristics are as follows:

NMR (fr 22) (CDCl₃): δ 4.5-4.8 (m, 2H), 4.9-5.25 (m, 2H), 5.7-6.2 (m, 1H), 6.52 (d, J = 3Hz, 1H), 7.0-7.48 (m, 4H), 7.58-7.78 (m, 1H).

Preparation 10 1-Benzyl-5-methylindole

To a stirred mixture of sodium amide (prepared from 0.9 g 39.13 mmoles of sodium) and ca 100 ml of liquid ammonia was added a solution of 5.08 g (38.73 mmoles) of 5-methylindole in 100 ml of ether during 5 minutes. The mixture was stirred for 1.5 hours. Then a solution of 5.15 g (40.68 mmoles) of benzyl chloride in 100 ml of ether was added during 10 minutes. The mixture was stirred for two hours. The ammonia was allowed to evaporate overnight. The inside of the flask was washed down with MeOH. Then 150 ml of H₂O was added. The layers were separated. The aqueous layer was extracted with 100 ml of ether. The combined ether phases were washed with 50 ml of brine and dried over MgSO₄. Evaporation of the solvent left 9.41 g of oil. The oil was chromatographed on a 700 g column of silica gel. The column was eluted with 30% CH₂Cl₂-Skellysolve B and 200 ml fractions were collected. The fractions were assayed by silica gel tlc (2 x 8") (25% CH₂Cl₂-Skellysolve B). Fractions 12-17 were combined giving 4.52 g (53%) of 1-benzyl-5-methylindole as a yellow-green oil.

Physical characteristics are as follows:

NMR (CDCl₃): δ 2.42 (s, 3H), 5.23 (s, 2H), 6.49 (d, J = 4 Hz, 1H), 6.91-7.58 (m, 9H).

Preparation 11 1-Benzyl-5-fluoroindol

To a solution of 0.8 g (3.03 mmoles) of 18-crown-6 in 100 ml of dry ether was added 3.27 g (29.14 mmoles) of potassium tert-butoxide. The mixture was stirred while a solution of 3.75 g (27.75 mmoles) of 5-fluoroindole in 80 ml of ether was added. The stirring was continued for 0.5 hour. Solid was present. Then 3.69 g (29.15 mmoles) of benzyl chloride in 80 ml of ether was added. The mixture was stirred for 28 hours. Water (100 ml) was added. The layers were separated. The aqueous layer was extracted with 100 ml of ether. The combined ether layers were washed with 50 ml of brine and dried over MgSO₄. Evaporation of the solvent left 6.95 g of orange oil. The oil was chromatographed on a 600 g column of silica gel. The column was eluted with 30% CH₂Cl₂-Skellysolve B and 200 ml fractions were collected. The fractions were assayed by silica gel tlc (1 x 4") (30% CH₂Cl₂-Skellysolve B). Fractions 11-15 were combined giving 0.88 g (14%) of 1-benzyl-5-fluoroindole as a pale yellow oil which contained a small amount of 1,3-dibenzyl-5-fluoroindole.

Physical characteristics are as follows:

NMR (CD₃OD): δ 5.23 (s, 2H), 6.46 (d, J = 4Hz, 1H), 6.7-7.32 (m, 9H). Also present in the spectrum are two small singlets one at 3.98 and the other at 5.13 δ , which are from the 1,3-dibenzyl-5-fluoroindole impurity.

Fractions 19-29 were combined giving 2.28 g of recovered 5-fluoroindole as a solid.

Preparation 12 N,N-Dimethyl-2-oxoacetamide

To a solution of 5.21 g (25.51 mmoles) of (L)-N,N-dimethyltartramide in 100 ml of MeOH was added 5.82 g (25.53 mmoles) of paraperiodic acid. The mixture became warm. The resulting solution was allowed to stand for 24 hours giving a yellow solution. The solvent was evaporated using a rotary evaporator and a water bath at 40° leaving a viscous orange-brown oil. The oil was triturated with 250 ml of ether causing a solid to separate. The mixture was filtered. Evaporation of the solvent from the filtrate left 4.97 g of brown oil. The oil was chromatographed on a 300 g column of silica gel. The column was eluted with 10% MeOH-CH₂Cl₂ and 100 ml fractions were collected. The fractions were assayed by silica gel tlc (1 x 4") (10% MeOH-CH₂Cl₂). Fractions 7-11 were combined giving 4.92 g (95%) of N,N-dimethyl-2-oxoacetamide as a brown oil.

Physical characteristics are as follows:

NMR (CDCl₃): δ 3.11 (s, 3H), 3.19 (s, 3H), 5.08 (s, 1H), 9.58 (very small s). A MeOH peak was also present. Since the peak at 9.58 δ is so small, the compound must exist in a polymeric form.

Preparation 13 Diethoxyacetamide

A mixture of 24.85 g of ethyl diethoxyacetate and 140 ml of concentrated ammonium hydroxide was stirred for 3 hours. The ammonia and H₂O were evaporated under reduced pressure on a water bath at 50-60° leaving a wet solid. The wet solid was dried in a vacuum oven at 53° for 18 hours giving a dark pink solid. The solid was dissolved in CH₂Cl₂. The solution was filtered to remove a small amount of red insoluble material. The filtrate was concentrated and Skellysolve B was added. Cooling gave 18.0 g (87%) of diethoxyacetamide as orange plates, m.p. 76.5-79°.

Preparation 14 2-(3-Trifluoromethylphenyl)- Δ -1-Pyrroline

To magnesium metal turnings (2.19 g, 90 mmol) covered with dry ether (40 mL) was added ca. 10% of a solution of 3-trifluoromethylbromobenzene (10.13 g, 45 mmol) in Et₂O (10 mL). When the reaction had commenced the remaining halide solution was added at such a rate so as to maintain a gentle reflux. After the addition was complete the brown mixture was heated under reflux for 30 minutes; then was cooled to room temperature and transferred via cannula to a flask (250 mL, three-neck RB) equipped with a reflux condenser and an additional funnel. The Grignard reagent was diluted with Et₂O (100 mL) and a solution of freshly distilled 4-chlorobutyronitrile (4.66 g, 45 mmol) in Et₂O (50 mL) was added over a period of 20 minutes. The resulting solution was heated under reflux for 30 minutes, then was allowed to cool to room

temperature and stir overnight. The solvent was removed in vacuo and the gummy residue refluxed in o-xylene (100 mL) for one hour, then was allowed to cool to room temperature and was treated with 10% aqueous NH_4Cl (100 mL). The organic phase was separated, the aqueous layer was extracted with Et_2O (100 mL) and the combined organic phases were acidified to pH 1 with 6N aqueous HCl . The aqueous layer was separated, extracted with Et_2O (100 mL) and the pH was adjusted to 14 with 20% aqueous NaOH . The aqueous phase was extracted with Et_2O (2 x mL), the combined organic extracts were washed with water (0.25 L), brine (0.25 L), dried (Na_2SO_4) and then concentrated in vacuo to furnish the title compound (3.43 g, 35%) as a brown oil which was utilized without further purification.

Physical characteristics are as follows:

- 10 TLC: (Merck; EtOAc-hexanes, 1:1; UV (+); ammonium molybdate): $R_f = 0.43$.
 $^1\text{H-NMR}$ (300 MHz, CDCl_3): $\delta = 8.12$ (s, 1), 8.01 (d, $J = 7.8\text{Hz}$, 1), 7.53 (m, 1), 4.10 (m, 2), 2.96 (m, 2), 2.08 (m, 2).
 $^{13}\text{C-NMR}$ (75.5 MHz, CDCl_3): $\delta = 173.2, 136.2, 130.6, 128.8, 126.7, 126.0, 124.2, 122.5, 61.6, 34.8, 22.6$.

15 Preparation 15 2(3-Trifluoromethylphenyl)-pyrroline

To a solution of 2(3-trifluoromethylphenyl)pyrroline (3.43 g, 16 mmol) in methanol-THF (100 mL, 1:1, v/v) was added glacial acetic acid (5 mL) followed immediately by NaBH_3CN (1.31 g, 21 mmol). After stirring for two hours at room temperature the reaction mixture was concentrated in vacuo and the resulting rust colored solid was treated with 20% aqueous NaOH (25 mL) to give a rust colored solution and suspended solids. The mixture was cast into water (100 mL) and EtOAc (100 mL). The organic phase was separated, the aqueous layer was extracted with an additional volume (100 mL) of EtOAc, and the combined organic extracts were washed with water (0.25 L), brine (0.25 L) and dried (Na_2SO_4). Concentration in vacuo provided the crude amine as a brown liquid which was purified by chromatography on a column of silica gel (230-400 mesh, 500 g, 70 mm o.d., EtOAc-hexanes 30:70, 400 mL fractions) using the flash technique. Fractions 27-50 afforded 2.56 g (74%) of the title compound as a yellow oil.

Physical characteristics are as follows:

- 30 TLC: (Merck; EtOAc-hexanes, 1:1; UV (+); ammonium molybdate): $R_f = 0.08$.
 $^1\text{H-NMR}$ (300 MHz, CDCl_3): $\delta = 7.39$ -7.64 (4), 4.18 (t, $J = 7.7\text{Hz}$, 1), 3.20 (m, 1), 3.04 (m, 1), 2.20 (m, 1), 2.01 (m, 1), 1.90 (m, 2), 1.6 (m, 1).
 $^{13}\text{C-NMR}$ (75.5 MHz, CDCl_3): $\delta = 147.1, 129.9, 128.7, 126.7, 123.5, 123.2, 122.9, 61.9, 46.9, 34.5, 25.5$.

35 Preparation 16 1-Phenyl-1H-indole-3-acetonitrile- α -((3-trifluoromethyl)phenyl)methylamine

To a solution of 3-trifluoromethylbenzylamine (4.38 g, 25 mmol) and NaCN (11.23 g, 25 mmol) in 1.00 M aqueous HCl (25 mL) was added one portion N-benzylindole-3-carboxyaldehyde (5.90 g, 25 mmol) in MeOH (25 mL). The mixture was allowed to stir for five hours, then the reaction was cast into Et_2O (1.0 L) and 0.3N aqueous NaOH (1.0 L). The organic phase was separated, washed with brine (1.0 L) and dried (Na_2SO_4). Concentration in vacuo afforded the crude aminonitrile as an oily red-orange solid which was purified by chromatography on a column of silica gel (230-400 mesh, 500 g, 70 mm o.d., Et_2O -hexanes 1:4, 300 mL fr) using the flash technique. Fractions 6-12 gave 3.76 g (36%) of 1 as a relatively unstable cream colored solid which was contaminated with the starting aldehyde. This compound was utilized in the next reaction without further purification. Physical characteristics are as follows:

TLC: (Merck; Et_2O -hexanes, 1:1.

UV (+); ammonium molybdate); $R_f = 0.20$.

$^1\text{H-NMR}$ (300 MHz, CDCl_3): $\delta = 1.94$ (brm, 1), 4.09 (dq, $J = 9.1, 1.6\text{Jz}$, 2), 5.04 (d, $J = 8.7\text{Hz}$, 1), 5.29 (s, 2), 7.0-7.8 (14).

IR (neat): 3330, 3050, 2925, 2850, 2210, 1640, 1540, 1440, 1340, 1160 (br), 890, 709, 735 and 695 cm^{-1} .

EI/MS (70eV): 392 (base), 301 (34.1), 281 (4.35), 248 (10.7), 232 (6.8), 220 (22.6), 208 (85.5), 91 (base).

Date attributed to Kalir, A.; Szara, S.J. Med. Chem. 2966, 9, 793.

55 Preparation 17 Methyl-3-trifluoromethylphenylacetate

Into a solution of 3-trifluoromethylphenylacetic acid (20.0 g, 98 mmol) in MeOH (100 mL), cooled in an

ice-water bath, was bubbled HCl (g) for 15 min. The mixture was allowed to warm to room temperature and was then concentrated in vacuo to furnish a clear, yellow-green liquid which was diluted with EtOAc (0.25L) and washed with saturated aqueous NaHCO₃ (2X0.25L), brine (0.25L), and dried (Na₂SO₄). Concentration in vacuo provided the crude ester which was purified by chromatography on a column of silica gel (230-400 mesh, 600g, 70mm o.d., ethyl acetate-hexanes 10:90, 400 mL fractions) using the flash technique. Fractions 6-9 provided 19.08g (89%) of methyl-3-trifluoromethylphenylacetate as a clear colorless liquid.

Physical characteristics are as follows:

TLC (Merck; EtOAc-hexanes, 25:75.

UV(+)) R_f = 0.44.

¹H-NMR: δ = 7.35-7.55 (4), 3.70 (s, 3), 3.67 (s, 2).

Preparation 18 Methyl-2-(3-trifluoromethylphenyl)-2-bromo-acetate

To a solution of methyl 3-trifluoromethylphenylacetate (37.79g, 173mmol) in CCl₄ (0.3L) was added NBS (33.91 g, 191 mmol) in six portions at one hour intervals. After the first reaction of NBS, two drops of 48% HBr were added and the mixture was warmed to reflux and maintained at reflux during the course of the NBS additions and for an additional 18 hours after the additions were completed. The mixture was cooled to room temperature and filtered through a pad of silica gel (230-400 mesh, 250 g, eluted with EtOAc-hexanes, 50:50, 0.75 L). Concentration in vacuo afforded the crude bromide as a clear yellow liquid. The crude product was purified by chromatography on a column of silica gel (230-400 mesh, 600 g, 700mm o.d., ethyl acetate-hexanes 25:75, 400 mL fractions) using the flash technique. Fractions 4-6 provided 39.6 g (77%) of methyl-2-(3-trifluoromethylphenyl)-2-bromo-acetate as a clear colorless liquid.

Physical characteristics are as follows:

TLC (Merck; EtOAc-hexanes, 25:75.

UV(+); ammonium molybdate) R_f = 0.45.

¹H-NMR: δ = 7.40-7.85 (4), 5.38 (s, 1), 3.81 (s, 3).

EI/MS (70eV): 298 (M⁺, 1.93), 2.96 (M⁺, 2.7), 239 (22.2), 237 (22.2), 217 (base), 189 (36.2), 159 (34.3).

Preparation 19 3-Trifluoromethylphenylglycine Methyl Ester

To a solution of methyl-3-trifluoromethylphenyl-2-bromo-acetate (22.38 g, 75.3 mmol) in CHCl₃ (0.1 L), cooled (0° C internal, cryo-cool) in a -10° C methanol bath, was added a solution of tetramethyl guanidinium azide (13.11 g, 82.9 mmol) in CHCl₃ (0.15 L) over one hour. After the addition was completed the solvent was removed in vacuo (no heat!) to afford a pale yellow solid. The crude yellow material was placed in Et₂O and the dissolved organic materials were separated from the tetramethylguanidinium hydrobromide by filtration through a pad of celite. The filter cake was rinsed with Et₂O (0.2 L) and the combined filtrates were concentrated in vacuo (no heat!) to furnish the desired azide (16.56 g, 85%) as a pale brown oil which was immediately utilized without further purification.

Physical characteristics are as follows:

TLC (Merck; EtOAc-hexanes, 25:75.

UV(+); ammonium molybdate) R_f = 0.23.

¹H-NMR: δ = 8.33 (brs, 1), 8.25 (d, J = 8Hz, 1), 7.92 (d, J = 8Hz, 1), 7.60-7.70 (1), 5.11 (s, 1), 4.01 (s, 3).

Infrared (neat): 3173, 3150, 2933, 2112, 1752, 1721, 1610, 1452, 1331, 1247, 1207, 1182, 1169, 1126, 1096, 1077, 805, 792, and 700 cm⁻¹.

The crude azide (16.56 g, 63.9 mmol) was dissolved in MeOH (0.1 L) and hydrogenated at 50 psi of H₂ over 10% Pd-C (1.5 g) in a Parr apparatus until hydrogen uptake ceased. The catalyst was removed by filtration through a pad of celite, the filter cake was rinsed with MeOH (0.2L) and the combined filtrates were concentrated in vacuo to give the crude amino acid ester as a an oily semi-solid. This material was partitioned between water (0.5 L) and EtOAc (0.5 L). The organic phase was discarded, the aqueous phase was made basic (20% aqueous NaOH) and extracted with EtOAc (2 X 0.25 L). The combined organic phases were dried (Na₂SO₄), and concentrated in vacuo to give the crude ester as a pale green oil. The crude product was purified by chromatography on a column of silica gel (230-400 mesh, 500g, 70 mm o.d., packed-ethyl acetate-hexanes 30:70, eluted ethyl acetate-hexanes 50:50, 400 mL fractions) using the flash technique. Fractions 6-10 provided 9.24 g (53%) of the desired 3-trifluoromethylphenylglycine methyl ester as a clear, colorless liquid.

Physical characteristics are as follows:

TLC (M rck; EtOAc-hexanes, 25:75).

UV(+); ammonium molybdate) Rf = 0.10.

¹H-NMR: δ = 7.69(brs, 1), 7.59(brt, J = 8Hz, 2), 7.47(d, J = 8Hz, 1), 4.70(s, 1), 3.72(s, 3), 1.98(s, 2).

Infrared (neat): 3385, 3320, 2958, 1741, 1451, 1438, 1331, 1271, 1223, 1167, 1125, 1097, 1074, 987, 906,

812, 786, and 701 cm⁻¹.

EI/MS (70eV): 233 (M⁺, 3.0), 174 (base), 127 (9.3).

Analysis: Calcd. for C₁₀H₂₁F₃NO₂: C, 51.51; H, 4.32; N, 6.01. Found: C, 51.74; H, 4.35, N, 6.08.

10 Example 1 α -(Trifluoromethyl)benzylamino-1]benzylindole-3-acetic acid

To a stirred solution of 5.52 g (0.06 mole) of glyoxylic acid monohydrate in 150 mL of MeOH was added 10.36 g (0.05 mole) of 1- benzylindole. To the resulting solution was added a solution of 8.76 g (0.05 mole) of 3-(trifluoromethyl)benzylamine in 50 mL of MeOH and 1 mL of acetic acid. The mixture was stirred for 20 hours. The solid which had separated was collected by filtration and washed with MeOH giving 16.97 (77%) of the title compound as an ivory solid, m.p. 171°-172.5° (dec.).

Physical characteristics are as follows:

Analysis: Calcd. for C₂₅H₂₁F₃N₂O₂: C, 68.48; H, 4.83; N, 6.39. Found: C, 68.61; H, 4.75; N, 6.40.

Mass Spectrum: Ions at (m/e): 393, 392, 208, 174, 159, 91, 69, 65, 57, 55.

20 Infrared: ν max (mull) 3106, 3061, 3030, 2519, 2396, 2345, 2252, 1637, 1608, 1541, 1497, 1389, 1360, 1333, 1288, 1246, 1210, 1184, 1116, 1079, 908, 802, 743, 729, 702 cm⁻¹.

Utilizing a procedure similar to that of Example 1 but substituting the appropriately substituted indole and amine for 1-benzylindole and 3-(trifluoromethyl)benzylamine, there are obtained the following compounds:

25

α -[3-(Trifluoromethyl)benzylamino]-1-methylindole-3-acetic acid as a white solid, m.p. 163° (dec.).

Physical characteristics are as follows:

30 Analysis: Calcd. for C₁₉H₁₇F₃N₂O₂: C, 62.98; H, 4.73; N, 7.73. Found: C, 62.73; H, 4.53; N, 7.70.

Mass Spectrum: Ions at (m/e): 317, 159, 158, 157, 145, 144, 132, 127, 109, 77.

NMR (DMSO-d₆): δ 3.74 (s, 3H), 3.94 (s, 2H), 4.58 (s, 1H), 6.9-7.88 (br m, 9H).

Infrared: ν max (mull) 3117, 3070, 3057, 3025, 2368, 2300, 2225, 2165, 1598, 1549, 1395, 1371, 1356, 1331, 1256, 1205, 1179, 1133, 1121, 1075, 910, 814, 806, 772, 742, 734, 706 cm⁻¹.

35

α -Benzylamino-1-benzylindole-3-acetic Acid as a white solid, m.p. 180° (dec.).

Physical characteristics are as follows:

40 Analysis: Calcd. for C₂₄H₂₂N₂O₂: C, 77.81; H, 5.99; N, 7.56. Found: C, 77.87; H, 6.04; N, 7.54.

Mass Spectrum: Ions at (m/e): 326, 325, 324, 235, 220, 107, 106, 92, 91, 65.

Infrared: ν max (mull) 3103, 3088, 3079, 3066, 3045, 3035, 2526, 2447, 2384, 2258, 2197, 1636, 1609, 1542, 1496, 1353, 1294, 1248, 741, 734, 695 cm⁻¹.

45

α -(4-Chlorobenzylamino)-1-benzylindole-3-acetic acid as a pale pink solid, m.p. 171° (dec.).

Physical characteristics are as follows:

50 Analysis: Calcd. for C₂₄H₂₁ClN₂O₂: C, 71.19; H, 5.23; Cl, 8.76; N, 6.92. Found: C, 71.16; H, 5.28; Cl, 8.80; N, 6.99.

Mass Spectrum: Ions at (m/e): 360, 359, 325, 220, 140, 127, 125, 106, 91, 77.

Infrared: ν max (mull) 3110, 3100, 3064, 3032, 2670, 2587, 2370, 1634, 1597, 1539, 1493, 1375, 1368, 1353, 1301, 804, 743 cm⁻¹.

55

α -[(3-Pyridinylmethyl)amino]-1-benzylindole-3-acetic acid as a pale orange solid, m.p. 183° (dec.).

Physical characteristics are as follows:

Analysis: Calcd. for $C_{23}H_{21}N_3O_2$: C, 74.37; H, 5.70; N, 11.31.

Mass Spectrum: Ions at (m/e): 327, 326, 325, 235, 221, 220, 92, 91, 90, 65.

Infrared: ν_{\max} (mull) 3108, 3088, 3063, 3051, 3029, 2668, 2642, 2380, 2327, 2282, 1614, 1607, 1578, 1544, 1495, 1479, 1466, 1456, 1360, 1346, 802, 762, 750, 735, 697, cm^{-1} .

5

α -[(3-Phenylpropyl)amino]-1-benzylindole-3-acetic acid as a white solid, m.p. 178° (dec.).

Physical characteristics are as follows:

10 Analysis: Calcd. for $C_{26}H_{26}N_2O_2$: C, 78.36; H, 6.58; N, 7.03. Found: C, 78.66; H, 6.61; N, 7.19.

Mass Spectrum: Ions at (m/e): 354, 353, 248, 235, 221, 220, 118, 92, 91, 65.

Infrared: ν_{\max} (mull) 3109, 3085, 3056, 3029, 2788, 2763, 2664, 2588, 2543, 2429, 1627, 1605, 1544, 1495, 1483, 1399, 1367, 742, 716, 701 cm^{-1} .

15

α -(4-Methoxybenzylamino)-1-benzylindole-3-acetic acid as a white solid, m.p. 170° (dec.).

Physical characteristics are as follows:

Analysis: Calcd. for $C_{25}H_{24}N_2O_3$: C, 74.98; H, 6.04; N, 7.00. Found: C, 75.17; H, 6.22; N, 6.95.

20 Mass Spectrum: Ions at (m/e): 355, 235, 221, 220, 137, 136, 121, 106, 91, 77.

Infrared: ν_{\max} (mull) 3102, 3089, 3061, 2590, 2398, 1639, 1612, 1592, 1585, 1538, 1518, 1496, 1480, 1377, 1311, 1252, 1187, 1174, 1031, 1015, 823, 815, 743 cm^{-1} .

25 α -Morpholino-1-benzylindole-3-acetic acid as a white solid, m.p. 202° (dec).

Physical characteristics are as follows:

Analysis: Calcd. for $C_{21}H_{22}N_2O_3$: C, 71.98; H, 6.33; N, 8.00. Found: C, 72.05; H, 6.43; N, 8.13.

40

α -[3-(Trifluoromethyl)benzylamino]-1-benzyl-5-methoxyindole-3-acetic acid as a white solid, m.p. 168° (dec).

45

Physical characteristics are as follows:

Analysis: Calcd. for $\text{C}_{26}\text{H}_{23}\text{F}_3\text{N}_2\text{O}_3$: C, 66.66; H, 4.95; N, 5.98. Found: C, 66.61; H, 5.00; N, 6.13.

Mass Spectrum: Ions at (m/e): 424, 422, 251, 150, 160, 159, 92, 91, 65.

Infrared: ν_{max} (mull) 3112, 3059, 3028, 2397, 2322, 1605, 1540, 1487, 1389, 1376, 1358, 1332, 1252, 1230,
1204, 1171, 1123, 1076, 826, 813, 799, 734, 705 cm^{-1} .

50

α -(N-Methyl-benzylamino)-1-benzylindole-3-acetic acid hydrate (4:1) as a white solid, m.p. 117° (dec).

55

Physical characteristics are as follows:

Analysis: Calcd. for $\text{C}_{25}\text{H}_{24}\text{N}_2\text{O}_2 \cdot 0.25\text{H}_2\text{O}$: C, 77.19; H, 6.35; N, 7.20. Found: C, 77.30; H, 6.27; N, 7.10.

Mass Spectrum: Ions at (m/e): 340, 339, 249, 220, 134, 121, 92, 91, 65.

NMR (DMSO- d_6): δ 2.2 (s, 3H), 3.7 (d, J = 3Hz, 2H), 4.65 (s, 1H), 5.45 (s, 2H), 7.05-7.7 (m, 14H), 7.78-7.98 (m, 1H).
Infrared: ν_{max} (mull) 3644, 3370, 3111, 3056, 3028, 2680, 1622, 1543, 1496, 1366, 1341, 1331, 1179, 907, 747, 723, 699 cm^{-1} .

5

α -[3-(Trifluoromethyl)benzylamino]-1-benzyl-5-chloroindole-3-acetic acid as a white solid, m.p. 192° (dec).

Physical characteristics are as follows:

10 Analysis: Calcd. for $\text{C}_{25}\text{H}_{20}\text{ClF}_3\text{N}_2\text{O}_2$: C, 63.49; H, 4.26; Cl, 7.50; N, 5.93. Found: C, 63.36; H, 4.45; Cl, 7.24; N, 5.86.

Mass Spectrum: Ions at (m/e): 473 (M^+), 427, 301, 300, 299, 298, 269, 159, 91.

Infrared: ν_{max} (mull) 3112, 2102, 3066, 3028, 2513, 2407, 2368, 2248, 1637, 1607, 1540, 1497, 1336, 1290, 1246, 1212, 1168, 1122, 1114, 1079, 909, 859, 800, 734, 728, 702 cm^{-1} .

15

α -[3-(Trifluoromethyl)benzylamino]-1-allylindole-3-acetic acid as a very pale orange solid, m.p. 163° (dec).

Physical characteristics are as follows:

20 Analysis: Calcd. for $\text{C}_{21}\text{H}_{19}\text{F}_3\text{N}_2\text{O}_2$: C, 64.94; H, 4.93; N, 7.21. Found: C, 65.22; H, 4.85; N, 6.94.

Mass Spectrum: Ions at (m/e): 388 (M^+), 344, 343, 185, 183, 174, 170, 159, 158, 156, 106.

Infrared: ν_{max} (mull) 3118, 3081, 3058, 2484, 2387, 2337, 2236, 1641, 1599, 1541, 1388, 1359, 1335, 1289, 1240, 1210, 1176, 1118, 1080, 908, 803, 738, 701 cm^{-1} .

25

α -[2-(Trifluoromethyl)benzylamino]-1-benzylindole-3-acetic acid as a white solid, m.p. 180° (dec).

Physical characteristics are as follows:

Analysis: Calcd. for $\text{C}_{25}\text{H}_{21}\text{F}_3\text{N}_2\text{O}_2$: C, 68.48; H, 4.83; N, 6.39. Found: C, 68.08; H, 4.81; N, 6.43.

30 Mass Spectrum: Ions at (m/e): 393, 392, 235, 175, 174, 159, 134, 106, 91, 57.

Infrared: ν_{max} (mull) 3129, 3085, 3071, 3064, 3054, 3032, 2773, 2623, 2424, 1612, 1598, 1573, 1496, 1317, 1175, 1163, 1124, 1033, 771, 742, 736, 696 cm^{-1} .

35

α -[4-(Trifluoromethyl)benzylamino]-1-benzylindole-3-acetic acid as a pale orange solid, m.p. 170° (dec).

Physical characteristics are as follows:

Analysis: Calcd. for $\text{C}_{24}\text{H}_{21}\text{F}_3\text{N}_2\text{O}_2$: C, 68.48; H, 4.83; N, 6.39. Found: C, 68.09; H, 4.79; N, 6.19.

Mass Spectrum: Ions at (m/e): 394, 393, 392, 235, 221, 220, 208, 174, 159, 91.

40 Infrared: ν_{max} (mull) 3089, 3065, 3029, 2539, 2496, 2401, 2247, 1636, 1607, 1542, 1497, 1356, 1327, 1248, 1170, 1125, 1070, 893, 825, 779, 745, 734, 727, 696 cm^{-1} .

α -[3-Chlorobenzylamino]-1-benzylindole-3-acetic acid as a pale orange solid, m.p. 162° (dec).

45

Physical characteristics are as follows:

Analysis: Calcd. for $\text{C}_{24}\text{H}_{21}\text{ClN}_2\text{O}_2$: C, 71.19; H, 5.23; Cl, 8.76; N, 6.92. Found: C, 71.39; H, 5.13; Cl, 8.61; N, 6.67.

Mass Spectrum: Ions at (m/e): 407, 405, 359, 266, 265, 264, 236, 235, 125, 91.

50 Infrared: ν_{max} (mull) 3120, 3065, 3055, 3030, 2608, 2526, 2476, 2405, 2316, 2266, 2153, 1596, 1545, 1496, 1388, 1362, 1249, 900, 846, 797, 738, 705 cm^{-1} .

α -(2-Chlorobenzylamino)-1-benzylindole-3-acetic acid as a white solid, m.p. 164° (dec).

55

Physical characteristics are as follows:

Analysis: Calcd. for $\text{C}_{24}\text{H}_{21}\text{ClN}_2\text{O}_2$: C, 71.19; H, 5.23; Cl, 8.76; N, 6.92. Found: C, 71.00; H, 5.26; Cl, 8.73; N, 6.88.

Mass Spectrum: Ions at (m/e): 405, 359, 266, 265, 264, 236, 235, 125, 91, 45.

Infrared: ν_{max} (mull) 3061, 3049, 3030, 2730, 2601, 2411, 1629, 1592, 1542, 1497, 1378, 1367, 1313, 1178, 770, 759, 744, 700 cm^{-1} .

5 α -[3,5-Bis(trifluoromethyl)benzylamino]-1-benzylindole-3-acetic acid as a white solid, m.p. 170° (dec).

Physical characteristics are as follows:

Analysis: Calcd. for $\text{C}_{25}\text{H}_{20}\text{F}_6\text{N}_2\text{O}_2$: C, 61.66; H, 3.98; N, 5.53. Found: C, 61.79; H, 3.97; N, 5.60.

10 Mass Spectrum: Ions at (m/e): 505, 462, 461, 398, 265, 264, 244, 236, 235, 227, 91.

Infrared: ν_{max} (mull) 3115, 3092, 3066, 3035, 2317, 2146, 1607, 1541, 1497, 1359, 1285, 1180, 1137, 908, 738, 683 cm^{-1} .

15 α -(4-Methylbenzylamino)-1-benzylindole-3-acetic acid as a white solid, m.p. 170° (dec).

Physical characteristics are as follows:

Analysis: Calcd. for $\text{C}_{25}\text{H}_{24}\text{N}_2\text{O}_2$: C, 78.10; H, 6.29; N, 7.29. Found: C, 77.91; H, 6.30; N, 7.30.

Mass Spectrum: Ions at (m/e): 386, 385, 340, 339, 265, 264, 236, 235, 105, 91.

20 Infrared: ν_{max} (mull) 3115, 3061, 3024, 2608, 2529, 2467, 2391, 2313, 2161, 1604, 1598, 1545, 1519, 1495, 1364, 1253, 891, 815, 808, 744, 735, 699 cm^{-1} .

α -[(2-Furylmethyl)amino]-1-benzylindole-3-acetic acid as a white solid, m.p. 172° (dec).

25

Physical characteristics are as follows:

Analysis: Calcd. for $\text{C}_{22}\text{H}_{20}\text{N}_2\text{O}_3$: C, 73.31; H, 5.59; N, 7.77. Found: C, 73.38; H, 5.85; N, 7.80.

Mass Spectrum: Ions at (m/e): 361, 315, 266, 265, 264, 236, 235, 91, 81, 45.

30 Infrared: ν_{max} (mull) 3124, 3101, 3063, 3046, 3030, 2507, 2386, 2248, 1629, 1606, 1544, 1497, 1376, 1354, 1337, 1267, 1174, 1149, 1015, 930, 737, 695 cm^{-1} .

α -[(2-Thienylmethyl)amino]-1-benzylindole-3-acetic acid as a white solid, m.p. 181° (dec).

35

Physical characteristics are as follows:

Analysis: Calcd. for $\text{C}_{22}\text{H}_{20}\text{N}_2\text{O}_2\text{S}$: C, 70.18; H, 5.36; N, 7.44; S, 8.52. Found: C, 70.06; H, 5.44; N, 7.52; S, 8.51.

Mass Spectrum: Ions at (m/e): 378, 377, 331, 265, 264, 235, 217, 97, 91, 45.

40 Infrared: ν_{max} (mull) 3103, 3064, 3044, 3030, 2535, 2403, 1631, 1606, 1544, 1496, 1363, 1354, 1337, 1330, 747, 736, 703, 695 cm^{-1} .

α -(3-Methylbenzylamino)-1-benzylindole-3-acetic acid as a white solid, m.p. 166° (dec).

45

Physical characteristics are as follows:

Analysis: Calcd. for $\text{C}_{25}\text{H}_{24}\text{N}_2\text{O}_2$: C, 78.10; H, 6.29; N, 7.29. Found: C, 78.36; H, 6.52; N, 7.24.

Mass Spectrum: Ions at (m/e): 386, 385, 339, 266, 265, 264, 236, 235, 105, 91.

Infrared: ν_{max} (mull) 3118, 3054, 3026, 2605, 2522, 2476, 2422, 2361, 2317, 2267, 2151, 1604, 1598, 1545, 1496, 1387, 1361, 1253, 797, 738, 726, 707, 701 cm^{-1} .

50

α -(3,4-Dichlorobenzylamino)-1-benzylindole-3-acetic acid as an ivory solid, m.p. 180° (dec).

Physical characteristics are as follows:

55 Analysis: Calcd. for $\text{C}_{24}\text{H}_{20}\text{Cl}_2\text{N}_2\text{O}_2$: C, 65.61; H, 4.59; Cl, 16.14; N, 6.38. Found: C, 65.86; H, 4.46; Cl, 15.90; N, 6.46.

Mass Spectrum: Ions at (m/e): 439, 395, 393, 266, 265, 264, 236, 235, 231, 91.

Infrared: ν_{max} (mull) 3091, 3061, 3030, 2502, 2388, 2251, 1636, 1606, 1540, 1497, 1378, 1356, 1310, 1279,

1244, 1213, 902, 821, 778, 744, 728, 692 cm^{-1} .

α -(Tetrahydrofurfurylamino)-1-benzylindole-3-acetic acid as a pale pink solid, m.p. 170° (dec).

5

Physical characteristics are as follows:

Analysis: Calcd. for $\text{C}_{22}\text{H}_{24}\text{N}_2\text{O}_3$: C, 72.50; H, 6.64; N, 7.69. Found: C, 72.68; H, 6.35; N, 7.39.

Mass Spectrum: Ions at (m/e): 319, 247, 235, 220, 91, 71, 69, 65, 57, 55.

Infrared: ν_{max} (mull) 3117, 3087, 3061, 3050, 3033, 3024, 2696, 2630, 2552, 2264, 1625, 1579, 1538, 1496, 1356, 1339, 1266, 1173, 1089, 1038, 763, 748, 696 cm^{-1} .

10

α -(3-Fluorobenzylamino)-1-benzylindole-3-acetic acid as a white solid, m.p. 164° (dec).

15

Physical characteristics are as follows:

Analysis: Calcd. for $\text{C}_{24}\text{H}_{21}\text{FN}_2\text{O}_2$: C, 74.21; H, 5.45; N, 7.21. Found: C, 74.17; H, 5.40; N, 7.15.

Mass Spectrum: Ions at (m/e): 344, 343, 342, 235, 221, 220, 208, 124, 109, 91.

Infrared: ν_{max} (mull) 3120, 3058, 3031, 2607, 2522, 2478, 2387, 2324, 1605, 1595, 1544, 1495, 1387, 1363, 1251, 801, 737, 701, 697 cm^{-1} .

20

α -(4-Fluorobenzylamino)-1-benzylindole-3-acetic acid as a white solid, m.p. 185° (dec).

Physical characteristics are as follows:

25 Analysis: Calcd. for $\text{C}_{24}\text{H}_{21}\text{FN}_2\text{O}_2$: C, 74.21; H, 5.45; N, 7.21. Found: C, 73.96; H, 5.27; N, 7.19.

Mass Spectrum: Ions at (m/e): 343, 342, 235, 220, 124, 109, 92, 91, 65.

Infrared: ν_{max} (mull) 3091, 3071, 3058, 3050, 3031, 2534, 2491, 2394, 2335, 2268, 2170, 1634, 1608, 1603, 1542, 1515, 1497, 1355, 1337, 1308, 1288, 1247, 1224, 1209, 890, 826, 778, 747, 735, 724, 697 cm^{-1} .

30

α -(3-Methoxybenzylamino)-1-benzylindole-3-acetic acid as a white solid, m.p. 174° (dec).

Physical characteristics are as follows:

Analysis: Calcd. for $\text{C}_{25}\text{H}_{24}\text{N}_2\text{O}_3$: C, 74.98; H, 6.04; N, 7.00. Found: C, 74.92; H, 6.11; N, 6.91.

35 Mass Spectrum: Ions at (m/e): 355, 354, 235, 221, 220, 136, 122, 121, 91, 65.

Infrared: ν_{max} (mull) 3106, 3087, 3059, 2609, 2526, 2472, 2416, 2362, 1607, 1598, 1542, 1490, 1386, 1362, 1299, 1260, 1178, 1155, 1036, 898, 780, 749, 738, 701, cm^{-1} .

40

α -(3-(Trifluoromethyl)benzylamino)-1-benzyl-5-methylindole-3-acetic acid as a pink solid, m.p. 180° (dec).

Physical characteristics are as follows:

Analysis: Calcd. for $\text{C}_{25}\text{H}_{23}\text{F}_3\text{N}_2\text{O}_2$: C, 69.01; H, 5.12; N, 6.19. Found: C, 68.94; H, 5.09; N, 6.20.

Mass Spectrum: Ions at (m/e): 453, 451, 407, 278, 249, 234, 159, 91.

45 Infrared: ν_{max} (mull) 3122, 3088, 3063, 3028, 2607, 2532, 2500, 2426, 2394, 2324, 2222, 2152, 1593, 1542, 1497, 1487, 1389, 1332, 1253, 1203, 1175, 1123, 1076, 813, 791, 736, 707 cm^{-1} .

α -(3-(Trifluoromethyl)benzylamino)-1-benzyl-5-fluoroindole-3-acetic acid as an ivory solid, m.p. 183° (dec).

50

Physical characteristics are as follows:

Analysis: Calcd. for $\text{C}_{25}\text{H}_{20}\text{F}_4\text{N}_2\text{O}_2$: C, 65.78; H, 4.42; N, 6.14. Found: C, 65.98; H, 4.54; N, 5.98.

Mass Spectrum: Ions at (m/e): 457, 411, 309, 284, 283, 282, 253, 231, 159, 91.

55 Infrared: ν_{max} (mull) 3109, 3033, 2543, 2395, 2256, 1637, 1609, 1579, 1541, 1497, 1486, 1335, 1287, 1247, 1209, 1178, 1166, 1121, 901, 852, 801, 728, 701 cm^{-1} .

α -(Benzylamino)-indole-3-acetic acid as a white solid, m.p. 195° (dec).

Physical characteristics are as follows:

Analysis: Calcd. for $C_{17}H_{15}N_2O_2$: C, 72.83; H, 5.75; N, 10.00. Found: C, 73.12; H, 5.97; N, 10.12.

Mass Spectrum: Ions at (m/e): 235, 173, 145, 117, 107, 106, 91, 79, 77, 51.

Infrared: ν_{\max} (mull) 3183, 3109, 3034, 2648, 2569, 2495, 2446, 1630, 1619, 1556, 1540, 1498, 1377, 1343, 1230, 755, 738, 697 cm^{-1} .

α -(Diphenylmethylamino)-1-benzylindole-3-acetic acid hydrate (1:0:7) as a white solid, m.p. 123° (dec).

Physical characteristics are as follows:

Analysis: Calcd. for $C_{30}H_{26}N_2O_2 \cdot 0.7H_2O$: C, 78.47; H, 6.02; N, 6.10. Found: C, 78.92; H, 6.52; N, 6.33.

Mass Spectrum: Ions at (m/e): 400, 183, 167, 165, 120, 106, 105, 104, 91, 77.

Infrared: ν_{\max} (mull) 3636, 3250, 3107, 3087, 3064, 2718, 2664, 2645, 2523, 2442, 2341, 1700 w, sh, 1640, 1613, 1605, 1587, 1547, 1493, 1359, 1348, 747, 741, 735, 715, 696 cm^{-1} .

α -[(2-Furylmethyl)amino]indole-3-acetic acid as a yellow solid, m.p. 149° (dec).

Physical characteristics are as follows:

Analysis: Calcd. for $C_{15}H_{14}N_2O_3$: C, 66.65; H, 5.22; N, 10.37. Found: C, 66.26; H, 5.30; N, 10.39.

Mass Spectrum: Ions at (m/e): 225, 130, 97, 96, 81, 71, 69, 57, 55, 53.

Infrared: ν_{\max} (mull) 3179, 3108, 3074, 3055, 3033, 2607, 2320, ~ 2191, 1641, 1578, 1539, 1500, 1492, 1349, 1292, 1034, 771, 751 cm^{-1} .

α -[4-(Methoxycarbonyl)benzylamino]-1-benzylindole-3-acetic acid as an ivory solid, m.p. 183° (dec).

Physical characteristics are as follows:

Analysis: Calcd. for $C_{26}H_{24}N_2O_4$: C, 72.88; H, 5.65; N, 6.54. Found: C, 72.58; H, 5.57; N, 6.76.

Mass Spectrum: Ions at (m/e): 429, 383, 266, 265, 264, 236, 235, 149, 91, 18.

Infrared: ν_{\max} (mull) 3343, 3108, 3090, 3069, 2952, 2918, 2869, 2855, 1729, 1718, 1630, 1614, 1598, 1469, 1459, 1437, 1429, 1417, 1375, 1370, 1360, 1315, 1296, 1282, 1170, 1111, 1017, 758, 744 cm^{-1} .

α -[3-(trifluoromethyl)benzylamino]-1-benzyl-5-methoxy-6-methylindole-3-acetic acid, m.p. 176° C.

Physical characteristics are as follows:

Analysis: Calcd. for $C_{27}H_{25}F_3N_2O_3$: C, 67.21; H, 5.22; N, 5.81. Found: C, 67.00; H, 5.39; N, 5.70.

α -[3-(Trifluoromethyl)benzylamino]-1-benzyl-5,6-methylenedioxyindole-3-acetic acid, 178-180° C.

Physical characteristics are as follows:

Analysis: Calcd. for $C_{26}H_{21}F_3N_2O_4$: C, 64.73; H, 4.39; N, 5.81. Found: C, 64.51; H, 4.61; N, 6.03.

α -[3-(Trifluoromethyl)benzylamino]-1-benzyl-5-methoxy-6-isopropylindole-3-acetic acid, m.p. 166° C.

Physical characteristics are as follows:

Analysis: Calcd. for $C_{29}H_{29}F_3N_2O_3$: C, 68.22; H, 5.73; N, 5.49. Found: C, 68.07; H, 5.46; N, 5.61.

α -[3-(Trifluoromethyl)benzylamino]-1-benzyl-5-methoxy-4-methylindole-3-acetic acid, m.p. 154-155° C.

Physical characteristics are as follows:

Analysis: Calcd. for $C_{27}H_{25}F_3N_2O_3$: C, 67.21; H, 5.22; N, 5.81. Found: C, 66.90; H, 5.09; N, 5.95.

α -[3-(Trifluoromethyl)benzylamino]-1-benzyl-5-methoxy-6-chloroindole-3-acetic acid, m.p. 160.5-161 °C.

Physical characteristics are as follows:

Analysis: Calcd. for $C_{26}H_{22}ClF_3N_2O_3$: 503.1349 ($M^+ + H$). Found: 503.1335.

5

α -[3-(Trifluoromethyl)benzylamino]-1-benzyl-6-methylindole-3-acetic acid, m.p. 182.5-184.5 °C (dec).

Physical characteristics are as follows:

10 Analysis: Calcd. for $C_{26}H_{23}F_3N_2O_2$: C, 69.02; H, 5.12; N, 6.19. Found: C, 68.72; H, 5.25; N, 6.07.

α -[3-(Trifluoromethyl)benzylamino]-1-benzyl-5,6-dimethoxyindole-3-acetic acid, m.p. 157-158 °C.

15 Physical characteristics are as follows:

Analysis: Calcd. for $C_{27}H_{35}F_3N_2O_4$: 498.1766. Found: 498.1743.

α -[3-(Trifluoromethyl)benzylamino]-1-benzyl-5-methoxy-7-methylindole-3-acetic acid, m.p. 170-171 °C.

20

Physical characteristics are as follows:

Analysis: Calcd. for $C_{27}H_{25}F_3N_2O_3$: C, 67.21; H, 5.22; N, 5.81. Found: C, 67.88; H, 5.51; N, 5.93.

25 α -[3-(Trifluoromethyl)benzylamino]-1-[(2-diethylamino)ethyl]indole-3-acetic acid, m.p. 135.5-137 °C.

Physical characteristics are as follows:

Analysis: Calcd. for $C_{24}H_{28}F_3N_3O_2$: C, 64.41; H, 6.31; N, 9.39. Found: C, 64.15; H, 6.33; N, 9.33.

30

α -[3-(Trifluoromethyl)benzylamino]-1,2-diphenylindole-3-acetic acid, j.p. 209 °C (dec).

Physical characteristics are as follows:

Analysis: Calcd. for $C_{30}H_{23}F_3N_2O_2$: C, 71.99; H, 4.63; N, 5.61. Found: C, 71.99; H, 4.97; N, 5.72.

35

α -[3-(Trifluoromethyl)benzylamino]-1-benzyl-6-methoxyindole-3-acetic acid, m.p. 190-191 °C.

Physical characteristics are as follows:

40 Analysis: Calcd. for $C_{26}H_{23}F_3N_2O_3$: C, 66.67; H, 4.91; N, 5.98. Found: C, 66.69; H, 5.08; N, 5.90.

α -[3-(Trifluoromethyl)benzylamino]-1-benzyl-5-acetoxyindole-3-acetic acid, m.p. 187-188 °C (dec).

45 Physical characteristics are as follows:

Analysis: Calcd. for $C_{27}H_{23}F_3N_2O_4$: C, 65.32; H, 4.64; N, 5.65. Found: C, 65.08; H, 4.57; N, 5.66.

α -[3-(Trifluoromethyl)benzylamino]-1-benzyl-5-hydroxyindole-3-acetic acid, m.p. 190 °C (dec).

60

Physical characteristics are as follows:

Analysis: Calcd. for $C_{25}H_{21}F_3N_2O_3$: C, 66.08; H, 4.63; N, 6.17. Found: C, 66.57; H, 5.03; N, 6.48.

55 α -[3-(Trifluoromethyl)benzylamino]-1-benzyl-5-ethoxyindole-3-acetic acid, m.p. 171-172 °C.

Physical characteristics are as follows:

Analysis: Calcd. for $C_{27}H_{25}F_3N_2O_3$: C, 67.22; H, 5.19; N, 5.81. Found: C, 66.76; H, 5.44; N, 6.27.

α [3-(Trifluoromethyl)benzylamino]-1-benzyl-5-benzoyloxyindole-3-acetic acid, m.p. 173-174° C.

Physical characteristics are as follows:

Analysis: Calcd. for $C_{32}H_{27}F_3N_2O_3$: C, 70.59; H, 4.96; N, 5.15. Found: C, 70.44; H, 5.27; N, 5.74.

5

Example 2 α [3-(Trifluoromethyl)benzylamino]-1-benzylindole-3-acetic Acid Hydrochloride.

A 2.0 g portion of α [3-(trifluoromethyl)benzylamino]-1-benzylindole 3-acetic acid was added to 150 ml of THF containing an excess anhydrous hydrogen chloride. Within a few minutes a pink solution was obtained. The solvent was evaporated leaving a pink glassy solid. The solid was crystallized from acetone-hexane giving a pale pink solid which after drying at 66° in a vacuum oven for 22 hours became pale yellow. The solid was crystallized from EtOH-hexane giving 1.37 g (63%) of the title compound as a yellow solid, m.p. 163° (dec).

Physical characteristics are as follows:

Analysis: Calcd. for $C_{25}H_{21}F_3N_2O_2 \cdot HCl$: C, 63.22; H, 4.67; Cl, 7.47; N, 5.90. Found: C, 63.00; H, 4.93; Cl, 7.40; N, 5.80.

Mass Spectrum: Ions at (m/e): 439, 394, 393, 265, 264, 236, 159, 103, 91.

NMR (DMSO- d_6): δ 4.24 (d, J = 7Hz, 2H), 5.48 and 5.51 (s's, 3H), 7.13-8.07 (m, 15H).

Infrared: ν_{max} (mull) 3156, 3107, 3075, 3052, 3038, 3032, 2783, 2668, 2607, 2555, 2501, 2461, 2401, 1739, 1621, 1602, 1580, 1536, 1500, 1486, 1330, 1270, 1252, 1226, 1204, 1191, 1179, 1170, 1162, 1155, 1114, 1077, 883, 801, 741, 731, 702, 696 cm^{-1} .

Example 3 Sodium α [3-(Trifluoromethyl)benzylamino]-1-benzylindole-3-acetate

A mixture of 3 g (6.84 mmoles) of α [3-(trifluoromethyl)benzylamino]-1-benzylindole 3-acetic acid, 3.4 ml (6.80 mmoles) of 2N NaOH, and 100 ml of MeOH was warmed until a solution was obtained (one to two hours). The solvent was evaporated. The residue was dried in a vacuum oven at 66° for 70 hours giving 2.70 (86%) of the title compound as an orange solid, m.p. 210°-215°.

Physical characteristics are as follows:

Analysis: Calcd. for $C_{25}H_{20}F_3NaN_2O_2$: C, 65.21; H, 4.38; N, 6.09. Found: C, 65.57; H, 4.46; N, 6.12.

Mass Spectrum (FAB): Ions at (m/e): 484, 483 (M + Na)⁺, 393, 287, 286, 264, 235, 159, 91, 23.

Infrared: ν_{max} (mull) 3109, 3088, 3060, 3030, 1613, 1550, 1497, 1482, 1583, 1393, 1330, 1167, 1122, 1075, 915, 802, 791, 739, 700 cm^{-1} .

Example 4 α [3-(Trifluoromethyl)benzylamino]-1-benzylindole-3-acetic acid and methyl α [3-(trifluoromethyl)benzylamino]-1-benzylindole-3-acetate hydrochloride

To a stirred solution of 7.24 g (41.34 mmoles) of 3-(trifluoromethyl)benzylamine and 4 mL (4.2 g, 69.88 mmoles) acetic acid in 50 mL of MeOH was added 7.14 g (34.45 mmoles) of 1-benzylindole followed by a solution of 3.64 g (41.34 mmoles) of methyl glyoxylate in 50 mL of MeOH. The resulting solid was collected by filtration, washed with MeOH, and dried giving 4.28 g of pale pink solid. The solid and 50 mL of MeOH were heated to boiling. The majority of the solid did not dissolve. After cooling to room temperature, the solid was collected by filtration, and dried giving 4.07 g (27%) of α [3-(trifluoromethyl)benzyl]-1-benzylindole-3-acetic acid compound as a pale pink solid, m.p. 176°-178° (dec).

Physical characteristics are as follows:

Analysis: Calcd. for $C_{25}H_{21}F_3N_2O_2$: C, 68.84; H, 4.83; N, 6.39. Found: C, 68.55; H, 4.79; N, 6.28.

Mass Spectrum: Ions at (m/e): 438 (M +), 394, 393, 392, 235, 220, 175, 174, 159, 92, 91.

Infrared: ν_{max} (mull) 3109, 3061, 3029, 2516, 2395, 2248, 1637, 1606, 1541, 1496, 1337, 1166, 1114, 802, 743, 729, 701 cm^{-1} .

The solvent was evaporated from the combined original filtrate and washing. The residue was treated with 200 ml of H₂O and then NaHCO₃ was added until the CO₂ evolution ceased. The mixture was extracted with CH₂Cl₂ (3x100 ml) (some insoluble solid was present). The combined extracts were washed with 50 ml of brine and dried over MgSO₄. Evaporation of the solvent left 10.97 g of brown oil. The oil was chromatographed on a 700 g column of silica gel. The column was eluted with 2% MeOH-CH₂Cl₂ and 200 ml fractions were collected. The fractions were assayed by silica gel tlc (1x4") (25% acetone-Skellysolve B).

Fractions 23-30 were combined giving 5.8 g of brown oil. The oil was slurried with 50 ml of 25% acetone-Skellysolve B and then filtered to remove some insoluble solid. The filtrate was applied to a 400 g column of silica gel. The column was eluted with 25% acetone-Skellysolve B and 100 ml fractions were collected. The fractions were assayed as before. Fractions 14-15 were combined giving 2.06 g of methyl ester as a yellow-brown oil. The 2.06 g (4.55 mmoles) was dissolved in 50 ml of acetone and added to a solution of 0.53 g (4.57 mmoles) of fumaric acid in 10 ml of EtOH. The resulting solution was concentrated and then hexane was added. Cooling gave 2.22 g of white solid. The 0.89 g (1.97 mmoles) of methyl ester from fraction 16 was dissolved in 25 ml of acetone and then added to a solution of 0.23 g (1.98 mmoles) of fumaric acid in 5 ml of EtOH. The resulting solution was concentrated and then hexane was added. Cooling overnight gave 0.79 g of white solid. The 0.79 g and the 2.22 g were combined in acetone. The solution was concentrated. The solid (ca 0.53 g, m.p. ca 290° dec) which separated and which was removed by filtration was probably fumaric acid. The filtrate was concentrated and hexane was added. The solid which separated was removed by filtration. The filtrate was concentrated and hexane was added. Only a small amount of solid separated.

The solid was removed by filtration. The solvent was evaporated leaving 2.19 g of oil. A solution of the oil in 100 ml of ether was washed with NaHCO₃ solution and then with brine and dried over MgSO₄. Evaporation of the solvent left 1.90 g of yellow oil. NMR (CDCl₃): δ 2.22-2.4 (br s, 1H), 3.72 (s, 3H), 3.88 (s, 2H), 4.75 (s, 1H), 5.28 (s, 2H), 7.1-7.9 (m, 13H). Also peaks for EtOH were present.

The 1.90 g of oil was dissolved in ether. An excess of a solution of anhydrous hydrogen chloride in ether was added. Nothing separated. The solution was concentrated and hexane was added. An oil separated which after standing several days at room temperature began solidifying. The supernatant liquid was decanted. The remaining oil solidified within a few minutes. The solid was crystallized from CH₂Cl₂-hexane. After several hours a sticky solid had formed. The supernatant liquid was decanted. Upon rubbing, crushing and drying 1.10 g (7%) of α-[3-(trifluoromethyl)benzylamino]-1-benzylindole-3-acetic acid hydrochloride was obtained as an ivory free-flowing powder, m.p. 138° (dec).

Physical characteristics are as follows:

Analysis: Calcd. for C₂₆H₂₃F₃N₂O₂·HCl: C, 63.87; H, 4.95; Cl, 7.25; N, 5.73. Found: C, 64.01; H, 4.76; Cl, 7.05; N, 5.71.

Mass Spectrum: Ions at (m/e): 452, 395, 394, 393, 234, 233, 159, 92, 91, 65. NMR (CDCl₃): δ 3.7 (s, 3H), 4.0 (d, J = 13Hz, 1H), 4.7 (d, J = 13Hz, 1H), 5-12 (s, 1H), 5.38 (s, 2H), 7.12-7.83 (m, 13H), 7.9-8.18 (m, 3H). Infrared: ν_{max} (mull) 3092, 3067, 3052, 3027, 2603, 2551, 2512, 2434, 2384, 1745, 1605, 1559, 1541, 1496, 1331, 1206, 1168, 1129, 1076, 806, 741, 702 cm⁻¹.

The second supernatant liquid was concentrated and then cooled in the refrigerator for several days giving 0.55 g (3%) of α-[3-(trifluoromethyl)benzylamino]-1-benzylindole-3-acetic acid hydrochloride as an ivory solid.

Utilizing a procedure similar to that of Example 4 but substituting the appropriately substituted indole and amine for 1-benzylindole and 3-(trifluoromethyl)benzylamine, there is obtained the following compounds:

Methyl α-[3-(trifluoromethyl)benzylamino]-1,2-dimethylindole-3-acetate hydrochloride as a purple solid, m.p. 141° (dec).

Physical characteristics are as follows:

Analysis: Calcd. for C₂₁H₂₁F₃N₂O₂·HCl: C, 59.08; H, 5.20; Cl, 8.31; N, 6.56. Found: C, 59.05; H, 5.46; Cl, 8.18; N, 6.50.

Mass Spectrum: Ions at (m/e): 390, 332, 331, 172, 171, 159, 157, 156, 145, 144. NMR (DMSO-d₆): δ 2.42 (s, 3H), 3.41 (br s, 3H), 3.69 (s, 3H), 4.23 (br s, 2H); 5.51 (br s, 1H), 6.99-8.12 (m, 8H). Infrared: ν_{max} (mull) 3071, 3050, 2698, 2637, 2611, 2581, 2252, 1747, 1614, 1584, 1563, 1326, 1289, 1278, 1226, 1176, 1161, 1119, 1079, 853, 808, 749, 745, 703 cm⁻¹.

Methyl α-[3-(trifluoromethyl)benzylamino]-1-benzyl-2-methylindole-3-acetate hydrochloride as a pale grey solid, m.p. 138°-141°.

Physical characteristics are as follows:

Analysis: Calcd. for $C_{27}H_{25}F_3N_2O_2 \cdot HCl$: C, 64.47; H, 5.21; Cl, 7.06; N, 5.57. Found: C, 64.38; H, 5.34; Cl, 7.01; N, 5.42.

Mass Spectrum: Ions at (m/e): 466, 409, 408, 407, 316, 248, 247, 159, 157, 130, 91.

NMR ($CDCl_3$): δ 2.08 (s, 3H), 3.71 (s, 3H), 3.92 (d, J = 14 Hz, 1H), 4.5 (d, J = 14 Hz, 1H), 5.1 (s, 1H), 5.25 (s, 2H), 7.0-7.7 (m, 11H), 7.9-8.14 (m, 2H).

Infrared: ν_{max} (mull) 3066, 3027, 2718, 2625, 2606, 2588, 2496, 2410, 1754, 1741, 1616, 1605, 1592, 1573, 1557, 1497, 1350, 1330, 1271, 1228, 1206, 1170, 1163, 1155, 1123, 1078, 880, 804, 793, 744, 740, 704, 695 cm^{-1} .

α -[N-tert-butoxycarbonyl-3-(trifluoromethyl)benzylamino]-1-benzylindole-3-acetic Acid Hydrate (1:1) as a buff solid, m.p. 108°-111°.

Physical characteristics are as follows:

Analysis: Calcd. for $C_{30}H_{29}F_3N_2O_4 \cdot H_2O$: C, 64.74; H, 5.61; N, 5.03. Found: C, 64.62; H, 5.21; N, 5.04.

Mass Spectrum: Ions at (m/e): 539, 538, 494, 483, 438, 437, 393, 340, 264, 159, 91, 57, 45, 41, 29.

NMR ($CDCl_3$): δ 0.9-1.5 (br, 9H), 4.2-4.5 (br, 2H), 4.6-4.9 (br, 3H), 6.2-7.3 (br, 14H), 7.4-7.7 (br, 1H).

Infrared: ν_{max} (mull) 3430, 3113, 3062, 3031, 1689, 1651, 1616, 1551, 1497, 1330, 1163, 1125, 1074, 741, 701 cm^{-1} .

Example 5 α -[3-(Trifluoromethyl)benzylamino]-1-benzylindole-3-N,N-dimethylacetamide hydrochloride

A solution of 9.98 g (48.15 mmoles) of 1-benzylindole, 8.44 g (48.18 mmoles) of 3-(trifluoromethyl)benzylamine, 6 mL (6.29 g, 104.8 mmoles) of acetic acid, and 4.87 g (48.17 mmoles) of N,N-dimethyl-2-oxoacetamide in 150 mL of MeOH was stirred and then allowed to stand for four days. Then the solution was refluxed for one day. The solvent was evaporated. The residue was shaken with 100 mL of CH_2Cl_2 and 100 mL of dilute NaOH solution. The layers were separated. The aqueous layer was extracted with 100 mL of CH_2Cl_2 . The combined organic phases were washed with 50 mL of brine and dried over $MgSO_4$. Evaporation of the solvent left 21.79 g of yellow oil. The oil was chromatographed on a 1100 g column of silica gel. The column was eluted with 5% MeOH- CH_2Cl_2 and 200 mL fractions were collected. The fractions were assayed by silica gel tlc (1x4") (5% MeOH- CH_2Cl_2).

Fractions 26-30 were combined giving 7.61 g of crude α -[3-(trifluoromethyl)benzylamino]-1-benzylindole-3-N,N-dimethylacetamide as a yellow-brown oil. Fractions 23-25 were combined giving 6.86 g of α -[3-(trifluoromethyl)benzylamino]-1-benzylindole-3-N,N-dimethylacetamide as a yellow oil. A solution of the oil in ether was mixed with a solution of excess anhydrous HCl in ether. A pink oil separated. The solvent was evaporated (on a steam bath) until the oil had changed to a solid. The solid was collected by filtration and washed with ether giving 5.91 g (24%) of the titled compound as a pink solid, m.p. 187° (dec).

Physical characteristics are as follows:

Analysis: Calcd. for $C_{27}H_{27}H_{16}F_3N_3O \cdot HCl$: C, 64.60; H, 5.42; Cl, 7.06; N, 8.37. Found: C, 64.46; H, 5.54; Cl, 6.94; N, 8.34.

Mass Spectrum: Ions at (m/e): 485, 426, 395, 394, 393, 234, 233, 159, 92, 91, 72, 65.

NMR (CD_3OD): δ 2.81 (s, 3H), 2.96 (s, 3H), 4.34 (s, 2H), 4.73-4.98 (br, 2H), 5.43 (s, 2H), 5.91 (s, 1H), 7.15-8.0 (m, 14H).

Infrared: ν_{max} (mull) 3097, 3049, 2655, 2516, 2470, 2430, 2406, 2368, 1643, 1615, 1582, 1535, 1495, 1331, 1182, 1173, 1155, 1122, 1079, 794, 746, 732, 701 cm^{-1} .

Example 6 Ethyl α -[3-(trifluoromethyl)benzylamino]-1-benzylindole-3 acetate

To a magnetically stirred suspension of α -[3-(trifluoromethyl)benzylamino]-1-benzylindole-3-acetic acid (21.9 g, 0.05 mol) in 250 mL of methanol at room temperature was treated with 11.34 g of sodium methoxide (25% in methanol) at once. The resulting solution was stirred for two hours, concentrated directly on a rotary evaporator and finally the resulting white residue was pumped down under high vacuum using a warm water bath at ca 50° C. The dry sodium salt was dissolved in 100 mL of dimethylformamide, charged at once with ethyl iodide (9.36 g, 0.06 mol, 1.20 eq) and stirred in the dark for 48 hours with an additional 50 mL of dimethylformamide being added after 20 hours to facilitate stirring of the gelatinous precipitate which formed. The contents were diluted with ether and poured into 125 mL of ice water plus 125 mL of

saturated brine. The aqueous phase was separated from the organic layer and extracted once more with ether. The combined organic extracts were dried with anhydrous Na_2SO_4 and concentrated at reduced pressure. Flash chromatography with 250 g of silica gel packed and eluted with ethyl acetate-hexane (1:4) gave the title compound as a yellow oil.

5 Substitution of methyl iodide for ethyl iodide afforded methyl- α -[3-(trifluoromethyl)benzylamino]-1-benzylindole-3-acetate in 51% yield.

Example 7 Ethyl α -[3-(trifluoromethyl)benzylamino]-1-ethoxycarbonyl-indole-3-acetate hydrochloride

10 To a magnetically stirred solution of ethyl α -[3-(trifluoromethyl)benzylamino]-indole-3-acetate (1.00 g, 2.66 mmol) in 15 mL of DMF was added under nitrogen 0.112 g (2.79 mmol) of sodium hydride (60% oil dispersion). After stirring at room temperature for 10 minutes, 0.26 mL (2.79 mmol) of ethyl chloroformate was added. Stirring was continued for two hours at room temperature. At the end of this time, the reaction
15 contents were poured into ice water, the aqueous solution extracted with ether and the ether solution washed with saturated brine and dried over anhydrous Na_2SO_4 . Removal of the solvent in vacuo gave the crude product which was chromatographed with 80 g of silica gel using hexane-ethyl acetate (4:1) to yield 0.857 g of the title compound.

Physical characteristics are as follows:

20 TLC (Skellysolve B - EtOAc, Rf 0.65).

NMR (CDCl_3 , δ) 8/18 (m, 1H), 7.67-7.23 (m, 8H), 4.60 (s, 1H), 4.47 (m, 2H), 4.21 (m, 2H), 3.86 (m, 2H), 1.47 and 1.22 (2 triplets, 6H).

The above product was treated with ethereal-HCl to afford after crystallization from ether-hexane 0.797 g of HCl salt, m.p. 153° - 155° C.

25 Physical characteristics are as follows:

Analysis: Calcd. for $\text{C}_{23}\text{H}_{23}\text{F}_3\text{N}_2\text{O}_4 \cdot \text{HCl}$: C, 57.02; H, 4.96; N, 5.79. Found: C, 57.25; H, 5.09; N, 5.85.

NMR (CDCl_3 , δ) 8.31 (s, 1H), 8.75 (m, 1H), 8.00 (m, 1H), 7.62-7.26 (m, 6H), 4.97 (s, 1H), 4.77 (m, 1H), 4.50 (m, 2H), 4.27-4.04 (m, 3H), 1.49 and 1.15 (2 triplets, 6H).

Utilizing a procedure similar to that in Example 7, but substituting the appropriate chloroformate for
30 ethyl formate, there is obtained ethyl α -[3-(trifluoromethyl)benzylamino]-1-benzylloxycarbonyl-indole-3-acetate hydrochloride, m.p. 150° - 152° C. and methyl- α -[N-methyl-3-(trifluoromethyl)benzylamino]-1-benzylindole-3-acetate hydrochloride, m.p. 151° - 154° C.

35 Example 8 Methyl α -[3-(trifluoromethyl)benzylamino]-1-benzylindole-3-acetate

To a magnetically stirred solution of 100 mL of methanol cooled in an ice-acetone bath at ca. -15° C., was treated dropwise with acetyl chloride (27.3 g, 350 mmol, 35 eq) over a six-minute period as a convenient way to generate HCl in situ. The solution was stirred at ambient temperature for 45 minutes,
40 then solid α -[3-(trifluoromethyl)benzylamino]-1-benzylindole-3-acetic acid was added which formed a dark rose colored solution. After stirring for 22 hours the reaction mixture was poured into 100 mL of saturated NaHCO_3 solution containing 100 mL of crushed ice, basified with additional solid NaHCO_3 powder until the rose color dissipated and extracted twice with ether. The combined organic extracts were washed with saturated NaHCO_3 (1x75 mL), saturated brine (1x100 mL), dried with anhydrous Na_2SO_4 and concentrated in
45 vacuo. Flash chromatography with 100 g of silica gel using ethyl acetate-hexane (1:2) afforded 4.07 g of the title compound as a golden oil.

Example 9 Methyl α -[3-(trifluoromethyl)benzylamino]-1-benzylindole-3-acetate

50 To a magnetically stirred solution of ethyl α -[3-(trifluoromethyl)benzylamino]-1-benzylindole-3-acetate ester (7.76 g, 16.7 mmol) in 125 mL of methanol was added 3.80 mL (16.7 mmol) of 25% sodium methoxide in methanol solution. Stirring was continued at room temperature for 15 hours. At the end of this time, the methanolic solution was poured onto 150 mL of crushed ice, thoroughly extracted with methylene
55 chloride and the organic layer dried over anhydrous sodium sulfate. Concentration of the solvent in vacuo gave the crude product which was chromatographed over 150 g of silica gel using hexane-ethyl acetate (4:1) to afford the title compound as an oil in quantitative yield.

Example 10 Ethyl α -[3-(trifluoromethyl)benzylamino]-1-benzylindole-3-acetate

To a magnetically stirred solution of methyl α -[3-(trifluoromethyl)benzylamino]-1-benzylindole-3-acetate hydrochloride (100 mg) in 8 mL of ethanol was added 70 μ L of 25% sodium methoxide in methanol. After stirring at room temperature for two hours, TLC analysis showed 90% conversion to the title compound.

Example 11 Methyl α -[3-(trifluoromethyl)benzylamino]-1-benzylindole-3-acetate hydrochloride

A magnetically stirred solution of methyl α -[3-(trifluoromethyl)benzylamino]-1-benzylindole-3-acetate (4.07 g, 9.0 mmol) in 65 mL of ether cooled at 0°-5° C was treated dropwise over a four-minute period with a stock solution of hydrogen chloride in ether (3.8 mL, 11.71 mmol, 1.3 eq, 3.1 mmol per mL). The cooling bath was removed after addition was completed and the mixture stirred at room temperature overnight. The precipitated white solid was collected, washed with ether-hexane (1:1) and recrystallized from acetone-ethyl acetate-ether solvent mixture to yield 4.18 g (95%) of the title compound.

Example 12 Preparation of Ethyl α -[3-(trifluoromethyl)benzylamino]-1-ethylindole-3-acetate, hydrochloride

Ethyl α -[3-(trifluoromethyl)benzylamino]-1-ethylindole-3-acetate (1.50 g, 3.70 mmol) was placed in 25 mL of ether, saturated with HCl gas and stirred under nitrogen for 30 minutes. The contents were concentrated to dryness in vacuo and the resulting solid recrystallized from acetone-ether (1:5) to give 1.30 g of the title compound as a crystalline white solid, m.p. 141°-143° C.

Physical characteristics are as follows:

Analysis: Calcd. for $C_{22}H_{24}F_3N_2O_2Cl$: C, 59.93; H, 5.49; N, 6.35; F, 12.93; Cl 8.04. Found: C, 59.68; H, 5.68; N, 6.30; F, 12.99; Cl 7.90.

NMR ($CDCl_3$, δ) 7.94-7.17 (m, 9H), 5.00 (s, 1H), 4.30-3.90 (m, 4H), 1.60-1.50 (m, 5H), 1.16 (t, 3H, J = 7 Hz).

Example 13 Ethyl α -[N-ethyl-3-(trifluoromethyl)benzylamino]-1-benzylindole-3-acetate, ethyl α -[N-ethyl-3-(trifluoromethyl)benzylamino]-indole-3-acetate, and ethyl α -[3-(trifluoromethyl)benzylamino]-indole-3-acetate

To a magnetically stirred suspension of α -[3-(trifluoromethyl)benzylamino]-indole-3-acetic acid (20.88 g, 60 mmol) in 350 mL of methanol was added 16.46 mL (72 mmol) of 25% sodium methoxide in methanol solution. The contents were allowed to stir under nitrogen at room temperature for one hour. At the end of this period the methanol was removed in vacuo and replaced with 150 mL of dimethylformamide (DMF). The reaction mixture was cooled in an ice-water bath, 5.76 mL (72 mmol) of ethyl iodide added, and the reaction stirred overnight in the dark at room temperature. The reaction was diluted with one liter of water, the aqueous phase thoroughly extracted 3x with ether, the ether extract washed with saturated brine and dried over anhydrous sodium sulfate. Removal of the ether in vacuo gave the crude product which was purified by flash chromatography (600 g silica gel). Elution with hexane-ethyl acetate (4:1) afforded 1.22 g of ethyl α -[N-ethyl-3-(trifluoro-methyl)-benzylamino]-1-ethylindole-3-acetate (least polar), 2.76 g of ethyl α -[N-ethyl-3-(trifluoromethyl)-benzylamino]-indole-3-acetate, 2.62 g of ethyl α -[3-(trifluoromethyl)-benzylamino]-1-ethylindole-3-acetate and 8.67 g of ethyl α -[3-(trifluoromethyl)-benzylamino]-indole-3-acetate (most polar).

Physical characteristics are as follows:

TLC 1:2 EtOAc-Hexane

Ethyl α -[N-ethyl-3-(trifluoromethyl)-benzylamino]-1-ethylindole-3-acetate

Example 14 Methyl α -[N-methyl-3-(trifluoromethyl)benzylamino]-1-(4-chlorobenzyl)indole-3-acetate

30

To a magnetically stirred suspension of sodium hydride (60% oil dispersion washed two times with hexane, 80 mg, 2.0 mmol) in 5 mL of dimethylformamide (DMF) under nitrogen was added methyl α -[3-(trifluoromethyl)benzylamino]-indole-3-acetate (752 mg, 2.0 mmol) dissolved in 2 mL DMF. Stirring was continued at room temperature for 10 minutes. At the end of this time, 0.322 g (2.0 mmol) of parachlorobenzyl chloride was added and the reaction stirred at room temperature for one hour. The reaction was diluted with ether and the ether solution was washed two times with water. The ether extract was then washed with saturated brine, dried over anhydrous sodium sulfate and concentrated in vacuo to give the crude product. Flash chromatography of the crude product with 100 g of silica gel and using hexane-ethyl acetate (4:10) as the eluent afforded 419 mg of the title compound.

35

40 Physical characteristics are as follows:

TLC: 1:1 Hexane-ethyl acetate, Rf 0.58.

NMR (CDCl₃, δ) 7.72-7.03 (m, 13H), 5.25 (s, 2H), 4.69 (s, 1H), 3.86 (s, 2H), 3.72 (s, 3H).

Example 15 Methyl α -(3-Trifluoromethylphenyl)methylamino)-5-methoxy-3-indoleacetate

50

To a stirred solution of 7.24 g (41.34 mmoles) of 3-(trifluoromethyl)benzylamine and 4 mL (4.2 g, 69.88 mmoles) of acetic acid in 50 mL of MeOH was added a solution of 3.65 g (41.34 mmoles) of glyoxylic acid monohydrate in 50 mL of MeOH followed by 5.97 g (34.45 mmoles) of 5-methoxyindole. The resulting solution was allowed to stand for three days. Solid separated during this period. The solid was collected by filtration, washed with MeOH, and dried giving 3.02 g of white solid, m.p. ca. 192° C (dec). The solvent was evaporated from the combined filtrate and washing. The residue was treated with 200 mL of H₂O. Sodium bicarbonate was added until the CO₂ evolution ceased. The mixture was extracted with CH₂Cl₂ (3x100 mL). The combined extracts were washed with 50 mL of brine and dried over MgSO₄. Evaporation of the solvent left 8.71 g of brown oil which slowly solidified. The solid was chromatographed on a 700 g column of silica

55

gel. The column was eluted with 30% acetone-Skellysolve B and 200 mL fractions were collected. The fractions were assayed by silica gel TLC (1x4") (40% acetone-Skellysolve B). Fractions 14-20 were combined and crystallized from CH₂Cl₂-hexane giving 5.14 g of ivory-buff solid. The solid was recrystallized from acetone-hexane giving 4.8 g (36%) of the title compound as ivory needles, m.p. 109°-110.5° C.

5 Physical characteristics are as follows:

Example 20 1H-Indole-3-acetic acid, 1-[(4-chlorophenyl)methyl]- α -[[[3-(trifluoromethyl)phenyl]methyl]amino]-methyl ester

To a magnetically stirred suspension of sodium hydride (60% oil dispersion washed 2X with hexane, 80 mg, 2.0 mmol) in 5 mL of dimethylformamide (DMF) under nitrogen was added methyl α -[3-(trifluoromethyl)benzylamin]-indole-3-acetate (752 mg, 2.0 mmol) dissolved in 2 mL DMF. Stirring was continued at room temperature for 10 minutes. At the end of this time, 0.322 g (2.0 mmol) of parachlorobenzyl chloride was added and the reaction stirred at room temperature for one hour. The reaction was diluted with ether and the ether solution was washed 2X with water. The ether extract was then washed with saturated brine, dried over anhydrous sodium sulfate and concentrated in vacuo to give the crude product. Flash chromatography of the crude product with 100 g of silica gel and using hexane-ethyl acetate (4:1) as the eluent afforded 419 mg of the title compound.

Physical characteristics are as follows:

Analysis: Calcd. for C₂₅H₂₂ClF₃N₂O₂: 486.1322. Found: 486.1346.

Utilizing a procedure similar to that used in Example 20 there is obtained the following compounds:

1H-Indole-3-acetic acid, 1-butyl α -[[[3-(trifluoromethyl)phenyl]methyl]amino], ethyl ester, m.p. 153 ° -155 ° C.

Physical characteristics are as follows:

1H-Indole-3-acetic acid, 1-(cyclohexylmethyl)- α -[[[3-(trifluoromethyl)phenyl]methyl]amino]ethyl ester, monohydrochloride, m.p. 151°-153° C.

Physical characteristics are as follows:

Analysis: Calcd. for $C_{27}H_{24}F_3N_2O_2 \cdot HCl$: C, 63.71; H, 6.34; N, 5.50; Cl, 6.97. Found: C, 63.67; H, 6.49; N, 5.41; Cl, 6.27.

1H-Indole-3-acetic acid, 1-acetyl- α -[[[3-(trifluoromethyl)phenyl]methyl]amino]ethyl ester.

Physical characteristics are as follows:

Analysis: Calcd. for $C_{22}H_{21}F_3O_3N_2$: 418.1504. Found: 418.1510.

1H-Indole-3-acetic acid, 1-benzoyl- α -[[[3-(trifluoromethyl)phenyl]methyl]amino]ethyl ester.

Physical characteristics are as follows:

Analysis: Calcd. for $C_{27}H_{23}F_3O_3N_2$: 480.1661. Found: 480.1672.

1H-Indole-3-acetic acid, 1-benzoyl- α -[[[3-(trifluoromethyl)phenyl]methyl]amino]ethyl ester, monohydrochloride, m.p. 118°-139° C. (dec.).

Physical characteristics are as follows:

Analysis: Calcd. for $C_{27}H_{23}F_3O_3N_2 \cdot HCl$: C, 62.73; H, 4.68; N, 5.42; Cl, 6.86. Found: C, 61.17; H, 4.93; N, 5.26; Cl, 6.44.

1H-Indole-3-acetic acid, 1-acetyl- α -[acetyl[[[3-(trifluoromethyl)phenyl]methyl]amino]ethyl ester.

Physical characteristics are as follows:

Analysis: Calcd. for $C_{24}H_{23}O_4F_3N_2$: 460.1610. Found: 460.1616. 1H-Indole-3-acetic acid, α -[acetyl[[[3-(trifluoromethyl)phenyl]methyl]amino]ethyl ester.

Physical characteristics are as follows:

Analysis: Calcd. for $C_{22}H_{21}F_3O_3N_2$: 418.1504. Found: 418.1504.

1H-Indole-3-acetic acid, 1-[(2-chlorophenyl)methyl]- α -[[[3-(trifluoromethyl)phenyl]methyl]amino]methyl ester.

Physical characteristics are as follows:

Analysis: Calcd. for $C_{26}H_{22}ClF_3N_2O_2$: 486.1322. Found: 486.1332.

1H-Indole-3-acetic acid, 1-[(2,4-dimethylphenyl)methyl]- α -[[[3-(trifluoromethyl)phenyl]methyl]amino]methyl ester.

Physical characteristics are as follows:

Analysis: Calcd. for $C_{28}H_{27}F_3N_2O_2$: 480.2024. Found: 480.2019.

- 5 1H-Indole-3-acetic acid, 1-[(3-methoxyphenyl)methyl]- α -[[[3-(trifluoromethyl)phenyl]methyl]amino]methyl ester.

Physical characteristics are as follows:

Analysis: Calcd. for $C_{27}H_{25}F_3N_2O_3$: 482.1817. Found: 482.1839.

10

1H-Indole-3-acetic acid, 1-[(4-methoxyphenyl)methyl]- α -[[[3-(trifluoromethyl)phenyl]methyl]amino]methyl ester.

- 15 Physical characteristics are as follows:

Analysis: Calcd. for $C_{27}H_{25}F_3N_2O_3$: 482.1817. Found: 482.1847.

1H-Indole-3-acetic acid, 1-[(3-chlorophenyl)methyl]- α -[[[3-(trifluoromethyl)phenyl]methyl]amino]methyl ester.

20

Physical characteristics are as follows:

Analysis: Calcd. for $C_{26}H_{22}ClF_3N_2O_2$: 486.1322. Found: 486.1327.

- 25 1H-Indole-3-acetic acid, 1-(4-pyridinylmethyl)- α -[[[3-(trifluoromethyl)phenyl]methyl]amino]methyl ester.

Physical characteristics are as follows:

Analysis: Calcd. for $C_{25}H_{22}F_3N_3O_2$: 453.1664. Found: 453.1663.

30

Example 21 Methyl α -(phenylmethylamino)-3-indoleacetate

- To a stirred solution of 6.43 g (0.06 mole) of benzylamine and 5 mL (5.25 g, 0.09 mole) of acetic acid in 50 mL of MeOH was added a solution of 5.28 g (0.06 mole) of methyl glyoxylate in 50 mL of MeOH followed by 5.86 g (0.05 mole) of indole. The resulting solution was allowed to stand for 69 hours. The solvent was evaporated. The residue was treated with 200 mL of H_2O . Sodium bicarbonate was added until CO_2 evolution ceased. The mixture was extracted with CH_2Cl_2 (3 x 100 mL). The combined extracts were washed with 50 mL brine and dried over $MgSO_4$. Evaporation of the solvent left 16.2 g of orange-brown oil which solidified upon standing. The solid was chromatographed on a 700 g column of silica gel. The column was eluted with 7.5% MeOH- CH_2Cl_2 and 200 mL fractions were collected. The fractions were assayed by silica gel TLC (1x4") (5% MeOH- CH_2Cl_2). Fraction 10-14 were combined giving 12.7 g of red oil. The oil was chromatographed on a 700 g column of silica gel. The column was eluted with 40% acetone-Skellysolve B and 200 mL fractions were collected. The fractions were assayed by silica gel TLC (1x4") (40% acetone-Skellysolve B). Fractions 11-14 were combined and crystallized from ether-THF-hexane giving 8.07 g (55%) of the title compound as a pale pink solid, m.p. $91.5^\circ - 93^\circ C$.

- 45 Physical characteristics are as follows:

Analysis: Calcd. for $C_{18}H_{18}N_2O_2$: C, 73.45; H, 6.16; N, 9.52. Found: C, 73.27; H, 6.24; N, 9.52.

Mass Spectrum: Ions at (m/e): 294 (M^+), 236, 235, 144, 143, 130, 128, 106, 92, 91, 65.

NMR ($CDCl_3$): δ 2.28 (s, 1H), 3.68 (s, 3H), 3.81 (s, 2H), 4.71 (s, 1H), 6.9-7.45 (m, 9H), 7.6-7.85 (m, 1H), 8.4-8.7 (br, 1H).

50

Infrared: ν_{max} (mull) 3275, 3205, 3166, 3151, 3130, 3112, 3089, 3065, 3029, 1732, 1619, 1586, 1580, 1539, 1498, 1312, 1238, 1193, 1167, 1118, 1109, 989, 764, 753, 738, 703 cm^{-1} .

- 55 Example 22 1-Phenylmethyl-1H-indole-3-acetamide- α -((3-trifluoromethyl)phenyl)methylamine

To a solution of 3-trifluoromethylbenzyl amine (4.38 g, 25 mmol) and NaCN (1.23 g, 25 mmol) in 1.00 M aqueous HCl (25 mL) was added in one portion N-benzylindole-3-carboxaldehyde (5.90 g, 25 mmol) in

MeOH (25 ml). The mixture was allowed to stir for 5 hours, then the reaction was cast into Et₂O (1.0 L), and dried (Na₂SO₄). Concentration in vacuo afforded the crude amino-nitrile as an oily red-orange solid which was purified by chromatography on a column of silica gel (230-400 mesh, 500 g, 70 mm o.d., Et₂O-hexanes 1:4, 300 mL fr) using the flash technique. Fractions 6-12 gave 3.76 g (36%) of 1-phenylmethyl-1H-indole-3-acetonitrile- α -((3-trifluoromethyl)-phenyl)methylamine as a relatively unstable cream colored solid which was contaminated with the starting aldehyde. This compound was utilized in the next reaction without further purification.

To a solution of the above amino nitrile (3.50 g, 8.34 mmol) in CH₂Cl₂ (10 mL), cooled in an ice water bath, was added 30% H₂O₂ (3.9 mL) followed immediately by n-Bu₄NHSO₄ (0.616 g, 1.66 mmol) and 20% aqueous NaOH (3.1 mL). The two-phase mixture was allowed to stir for five hours at room temperature then was cast into CH₂Cl₂-H₂O (0.5 L each). The organic phase was separated, washed with brine (0.5 L), dried (Na₂SO₄), and then concentrated in vacuo to furnish the crude amide as a pale yellow viscous oil. The crude product was purified by chromatography on a column of silica gel (230-400 mesh, 500 g, 70 mm. o.d., EtOAc-hexanes 40:60, 500 mL fractions, using the flash technique. Fractions 16-24 afforded 1.49 g (41%) of the title compound as an extremely viscous, pale yellow oil which provided a white powdery solid after trituration with Et₂O.

Physical characteristics are as follows:

M.P.: 112°-113° C.

TLC: (Merck, EtOAc-hexanes, 1:1; UV (+); ammonium molybdate: R_f = 0.19.

¹H-NMR (300Hz, CDCl₃): δ = 7.0-7.7(14); 6.82 (brs, 1), 5.89 (brs, 1), 5.26 (s, 2), 4.54 (s, 2), 3.89 (s, 2), 2.27 (brs, 1).

¹³C-NMR (75.5 MHz, CDCl₃): δ = 175.1, 140.7, 137.0, 131.6, 128.9, 128.8, 127.8, 127.1, 126.9, 126.4, 125.0, 124.0, 122.4, 119.9, 119.5, 112.6, 110.1, 59.2, 51.9, 50.1.

Infrared (neat): 3368, 2957, 2868, 1705(w), 1656, 1465, 1455, 1378, 1330, 1188, 1173, 1162, 1123, 1074, 804, 745 and 703 cm⁻¹.

EI/MS (70eV): 437 (M⁺, 0.2), 393 (base), 159 (12.9), 91 (65.6).

Analysis: Calcd. for C₂₅H₂₂F₃N₃O: C, 68.64; H, 5.07; N, 9.60; Found: C, 68.26; H, 4.70; N, 9.68.

Example 23 1-Phenylmethyl-N-3-(trifluoromethyl)phenylmethyl-L-tryptophan methyl ester

To a stirring, ice-water cooled, suspension of (S)-(-)-1-benzyltryptophan methyl ester (2.50 g, 8.11 mmol) and 4A molecular sieves (1.50 g) in CH₂Cl₂ (100 mL) was added 3-trifluoromethyl benzaldehyde (1.4 mL, 10.5 mmol) via syringe followed by CF₃COOH (two drops). The mixture was allowed to warm to 10° C and was stirred overnight. The suspended solids were removed by filtration through a pad of celite and the filtrate was concentrated in vacuo to provide a clear, viscous, yellow oil. The crude imine was dissolved in methanol (75 mL), cooled in an ice-water bath, and NaBH₄ (0.34 g, 8.92 mmol) was added in portions over 20 minutes. After the addition was complete the cooling bath was removed and the mixture was stirred at room temperature for four hours. The solvent was removed in vacuo and the resulting pale yellow, viscous oil was purified by chromatography on a column of silica gel (230-400 mesh, 500 g, 70 mm o.d., packed EtOAc-hexanes 10:90; eluted EtOAc-hexanes 20:80; 400 mL fractions) using the flash technique. Fractions 10-13 afforded 3.55 g, 97% of the title compound as a viscous oil.

Physical characteristics are as follows:

TLC: (Merck; EtOAc-hexanes, 1:3.

UV (+); ammonium molybdate): R_f = 0.17.

¹H-NMR (300 MHz, CDCl₃): δ = 7.05-7.61 (14), 5.26 (s, 2), 3.88 (d, J = 13.7 Hz, 1), 3.62 (t, J = 6.6 Hz, 1), 3.59 (s, 3), 3.18 (m, 2), 2.10 (brs, 1).

¹³C-NMR (75.5 MHz, CDCl₃): δ = 174.8, 140.5, 137.4, 136.5, 131.4, 128.7, 127.6, 126.9, 126.7, 124.7, 123.7, 121.9, 119.3, 119.0, 110.0, 109.7, 61.4, 51.7, 51.6, 49.9, 29.3.

Infrared (neat): 3109, 2951, 1735, 1467, 1330, 1197, 1165, 1124, and 702 cm⁻¹.

EI/MS (70eV): 467 (M⁺, 5.5), 407 (7.6), 220 (base).

Analysis: Calcd. for C₂₇H₂₅F₃N₂O₂: C, 69.52, H, 5.40; N, 6.01. Found: C, 69.28; H, 5.15; N, 5.85.

Example 24 (D,L)-1-Phenylmethyltryptophan

A three-neck, one-liter flask equipped with a magnetic stir bath and placed in a dry ice-acetone bath was cooled to -78° C. while 370 mL of ammonia was condensed into the flask containing 163 mg of ferric

nitrate nonahydrate. The external cooling bath was then removed and pieces of sodium metal (2.62 g, 114.3 mmol) were added portionwise over 30 minutes. After stirring for an additional 10 minutes (d,l)-tryptophan (10.0 g, 49.0 mmol) suspended in 110 mL of ether was added to the dark solution over a ten-minute period. The reaction mixture was allowed to stir for another 30 minutes at refluxing liquid ammonia temperature, treated with benzyl chloride (8.23 g, 65.3 mmol) over a five-minute period. The dry ice-acetone condenser was removed and the contents stirred overnight while a gentle stream of nitrogen was used to slowly remove the ammonia. The remaining residue was dissolved in 50 mL of hot water, acidified to pH 5 with 5 mL of acetic acid which produced a viscous white slurry. An additional 50 mL of water and 60 mL of 95% ethanol were added and the mixture was heated to reflux. The contents which remained mostly insoluble was cooled in an ice bath, the white solids collected and successively washed with cold ethanol-water (1:1), cold 95% ethanol and finally ether to provide 14.45 g of the title compound. This mixture was used in the next reaction without purification.

Example 25 (D,L)-1-Phenylmethyltryptophan methyl ester

Hydrogen chloride gas was bubbled through 200 mL of methanol, cooled in an ice-acetone bath, over a 30-minute period. To this solution was added the title compound obtained in Example 24 (9.58 g) and the contents heated to reflux for five hours. The reaction mixture was cooled in an ice bath, the precipitated solids collected by filtration and washed with methanol-ether (1:1) to obtain 1.76 g of esters as their HCl salts. Concentration of the filtrate afforded an additional 8.60 g of product. The combined salts were treated with 1N aqueous NaOH and the aqueous solution was thoroughly extracted with ethyl acetate. The ethyl acetate was washed with brine, dried and concentrated in vacuo. Chromatography of the crude product using 125 g of silica gel and acetone-hexane as the eluent yielded 6.10 g of the title compound as a golden colored oil.

Physical characteristics are as follows:

Analysis: Calcd. for $C_{19}H_{20}N_2O_2$: 308. Found: 308.

Example 26 (D,L)-1-Phenylmethyl-N-(3-(trifluoromethyl)phenyl)methyltryptophan methyl ester

To 3.05 g of the (D,L)-1-phenylmethyl tryptophan methyl ester obtained in Example 24 dissolved in 100 mL of methanol, 1.60 mL of acetic acid, 1.72 g of meta-trifluoromethyltolualdehyde, cooled to 15° C with a cold water bath, was added 0.657 g of sodium cyanoborohydride. The cooling bath was removed after 15 minutes, the contents stirred at ambient temperature for an additional three hours and then treated with crushed ice after cooling the reaction mixture in an ice bath. The mixture was made basic with 100 mL of saturated sodium bicarbonate solution, extracted once with ethyl acetate, the ethyl acetate dried and then concentrated in vacuo. Chromatography of this crude product using 75 g of silica gel and ethyl acetate as the eluent afforded 2.10 g of the title compound.

Physical characteristics are as follows:

Analysis: Calcd. for $C_{27}H_{25}F_3N_2O_2$: C, 69.53; H, 5.36; N, 6.01. Found: C, 69.30; H, 5.44; N, 5.87.

Example 27 (D,L)-1-Phenylmethyl-N-(3-(trifluoromethyl)phenyl)methyltryptophan methyl ester HCl Salt

To a magnetically stirred solution of (D,L)-1-phenylmethyl-N-(3-(trifluoromethyl)phenyl)methyl-tryptophan methyl ester obtained in Example 26 (0.465 g) in 40 mL of ether cooled in a 0°-5° C. bath was bubbled HCl gas for two to three minutes. The white mass which precipitated was diluted with 10 mL of hexane, allowed to cool to 0°-5° C. and collected to give 478 mg of the title compound. A small sample was recrystallized with ethyl acetate-methanol-ether to give the title compound, m.p. 201°-203° C.

Physical characteristics are as follows:

Analysis: Calcd. for $C_{27}H_{25}N_2O_2 \cdot HCl$: C, 64.54; H, 4.98; N, 5.58. Found: C, 64.24; H, 5.41; N, 5.25.

Example 28 (D,L)-1-Phenylmethyl-N-(3-(trifluoromethyl)phenyl)methyl-Tryptophan

The methyl ester (1.00 g) isolated in Example 26 was treated with 20 mL of methanol and 4.00 mL of 1N sodium hydroxide and stirred at room temperature for 15 hours. The reaction was worked up in the

usual way and chromatographed using 40 g of silica gel and chloroform-methanol (85:15) as the eluent to afford 808 mg of the title compound, m.p. 125° C.

Physical characteristics are as follows:

Analysis: Calcd. for $C_{26}H_{23}F_3N_2O_2 \cdot H_2O$: C, 66.38; H, 5.32; N, 5.96. Found: C, 66.20; H, 5.05; N, 5.74.

5

Example 29 (D,L)-1-Ethylthiocarboxy-N-(3-(trifluoromethyl)phenyl)methyl-tryptophan methyl ester

A magnetically stirred solution of (D,L)-N-(3-(trifluoromethyl)methyl-tryptophan methyl ester (1.15 g, 3.06 mmol) in 15 mL of dimethylformamide, cooled to 18° C was treated with 3.21 mmol of sodium hydride. The cooling bath was removed after five minutes, the contents stirred for another 45 minutes at room temperature, then reacted with ethyl thiocloroformate (0.419 g, 3.21 mmol) for an additional 40 minutes. The reaction mixture was then poured into 50 mL of crushed ice, extracted with ethyl acetate, the combined organic extracts dried over anhydrous sodium sulfate and concentrated in vacuo. The crude product was chromatographed using 150 g of silica gel and elution with ethyl acetate-hexane afforded 457 g of the title compound.

Physical characteristics are as follows:

¹H NMR ($CDCl_3$) 3.84 (d, 1H), 7.58 (s, 1H), 7.53-7.22 (m, 7H), 3.93 (d, 1h), 3.76-3.66 (m, 1H), 3.68 (s, 3H), 3.66-3.58 (m, 1H), 3.18-2.98 (m, 4H), 1.43 (t, 3H).

20

Example 30 (D,L)-1-Ethylthiocarboxy-N-(3-(trifluoromethyl)phenyl)methyl-tryptophan methyl ester HCl Salt

Utilizing a procedure similar to that described in Example 27 0.457 g of the methyl ester yielded 0.474 g of the title compound, m.p. 180° -181° C.

Physical characteristics are as follows:

Analysis: Calcd. for $C_{23}H_{23}F_3N_2O_3S \cdot HCl$: C, 55.20; H, 4.80; N, 5.60. Found: C, 55.05; H, 4.62; N, 5.62.

Utilizing a procedure similar to those described previously there are obtained the following compounds:

30

DL-Methyl-1-(phenylmethyl)-tryptophan-methyl ester monohydrochloride.

Physical characteristics are as follows:

Analysis: Calcd. for $C_{19}H_{20}N_2O_2 \cdot 308$: Found: M⁺ 308.

35

DL-N-1-bis(phenylmethyl)-tryptophan-methyl ester.

Physical characteristics are as follows:

Analysis: Calcd. for $C_{26}H_{26}N_2O_2 \cdot 398$: Found: M⁺ 398.

Physical characteristics are as follows:

DL-1-(phenylmethyl)-tryptophan-N-[[3-(trifluoromethyl)phenyl]methyl]methyl ester.

45

Physical characteristics are as follows:

Analysis: Calcd. for $C_{27}H_{25}F_3N_2O_2$: C, 69.53; H, 5.36; N, 6.01. Found: C, 69.30; H, 5.44; N, 5.87.

DL-N-(1-methylethyl)-tryptophan-1-(phenylmethyl)methyl ester.

Physical characteristics are as follows:

Analysis: Calcd. for $C_{22}H_{26}N_2O_2$: C, 75.43; H, 7.43; N, 8.00. Found: C, 74.62; H, 7.41; N, 7.63.

55

DL-N-(1-methylethyl)-1-(phenylmethyl)-tryptophan-methyl ester, monohydrochloride, m.p. 207° -208° C.

Physical characteristics are as follows:

Analysis: Calcd. for $C_{22}H_{26}N_2O_2 \cdot HCl$: C, 68.39; H, 6.74; N, 7.25. Found: C, 68.19; H, 7.20; N, 7.01.

DL-1-(phenylmethyl)-N-[[3-(trifluoromethyl)phenyl]methyl]-tryptophan-methyl ester, monohydrochloride,
m.p. 201°-203° C. (dec.).

Physical characteristics are as follows:

Analysis: Calcd. for $C_{27}H_{25}F_3N_2O_2 \cdot HCl$: C, 64.54; H, 4.98; N, 5.58. Found: C, 64.24; H, 5.41; N, 5.25.

DL-N-1-bis(phenylmethyl)-tryptophan, m.p. 185° C.

Physical characteristics are as follows:

Analysis: Calcd. for $C_{25}H_{24}N_2O_2 \cdot H_2O$: C, 74.63; H, 6.47; N, 6.97; Found: C, 74.50; H, 5.85; N, 6.59.

DL-1-(phenylmethyl)-N-[[3-(trifluoromethyl)phenyl]methyl]-tryptophan, m.p. 125° C.

Physical characteristics are as follows:

Analysis: Calcd. for $C_{25}H_{23}F_3N_2O_2 \cdot H_2O$: C, 66.38; H, 5.32; N, 5.96. Found: C, 66.20; H, 5.05; N, 5.74.

DL-Methylester-tryptophan monohydrochloride

DL-N-[[3-(trifluoromethyl)phenyl]methyl]-tryptophan methyl ester

Physical characteristics are as follows:

Analysis: Calcd. for $C_{19}H_{19}F_3N_2O_2$ - 376. Found: M^+ 376.

DL-1-p-(4-chlorophenyl)methyl-N-[[3-(trifluoromethyl)phenyl]methyl]-tryptophan-methyl ester

Physical characteristics are as follows:

Analysis: Calcd. for $C_{26}H_{24}F_3N_2O_2Cl$ - 500. Found: M^+ 500.

DL-1-[(4-chlorophenyl)methyl]-N-[[3-(trifluoromethyl)phenyl]methyl]-tryptophan-methyl ester, m.p. 171°-172° C.

Physical characteristics are as follows:

Analysis: Calcd. for $C_{27}H_{24}ClF_3N_2O_2 \cdot HCl$: C, 60.45; H, 4.66; N, 5.22. Found: C, 60.05; H, 4.64; N, 5.05.

DL-N-[[3-(trifluoromethyl)phenyl]methyl]-tryptophan-methyl ester, monohydrochloride, m.p. 172°-173° C.

Physical characteristics are as follows:

Analysis: Calcd. for $C_{20}H_{19}F_3N_2O_2 \cdot HCl$: C, 58.25; H, 4.85; N, 6.80. Found: C, 58.21; H, 4.89; N, 6.82.

DL-1-[(ethylthio)carbonyl]-N-[[3-(trifluoromethyl)phenyl]methyl]-tryptophan

DL-1-[(ethylthiocarbonyl)-N-[[3-(trifluoromethyl)phenyl]methyl]-tryptophan monohydrochloride, m.p. 180°-181.5° C.

Physical characteristics are as follows:

Analysis: Calcd. for $C_{23}H_{23}F_3N_2O_3S \cdot HCl$: C, 55.20; H, 4.80; N, 5.60. Found: C, 55.05; H, 4.62; N, 5.61.

DL-1-(ethoxycarbonyl)-N-[[3-(trifluoromethyl)phenyl]methyl]-tryptophan methyl ester.

DL-1-(ethoxycarbonyl)-N-[[3-(trifluoromethyl)phenyl]methyl]-tryptophan-methyl ester, monohydrochloride, m.p. 189°-190° C.

Physical characteristics are as follows:

Analysis: Calcd. for $C_{23}H_{23}F_3N_2O_4 \cdot HCl$: C, 57.02; H, 4.96; N, 5.79. Found: C, 56.85; H, 5.08; N, 5.92.

DL-N-[[3-(trifluoromethyl)phenyl]methyl]-tryptophan, m.p. 227° C.

Physical characteristics are as follows:

Analysis: Calcd. for $C_{19}H_{17}F_3N_2O_2 \cdot H_2O$: C, 60.00; H, 5.00; N, 7.37. Found: C, 60.43; H, 4.80; N, 7.27.

D-N-(phenylmethyl)-tryptophan.

D-N-(phenylmethyl)-tryptophan-methyl ester.

D-1-(phenylmethyl)-N-[[3-(trifluoromethyl)phenyl]methyl]-tryptophan-methyl ester.

D-1-(phenylmethyl)-N-[[3-(trifluoromethyl)phenyl]methyl]-tryptophan-methylester monohydrochloride, m.p. 171°-172° C.

Physical characteristics are as follows:

Analysis: Calcd. for $C_{27}H_{25}F_3N_2O_2 \cdot HCl$: C, 64.54; H, 4.98; N, 5.58. Found: C, 64.28; H, 5.13; N, 5.19.

D-1-(phenylmethyl)-N-[[3-(trifluoromethyl)phenyl]methyl]-tryptophan, m.p. 170°-173° C.

Physical characteristics are as follows:

Analysis: Calcd. for $C_{26}H_{23}F_3N_2O_2$: C, 69.03; H, 5.09; N, 6.19. Found: C, 68.70; H, 5.29; N, 6.37.

Example 31 Methyl (+/-)- α -(1-phenylmethyl-3-indolylmethyl)aminophenylacetate (see Chart III for preparation of Examples 31-40)

To a suspension of methyl (+/-)-phenylglycinate hydrochloride (4.00 g, 19.8 mmol) in MeOH (50 mL), and HOAc (4 mL) was added 1-phenylmethyl-indole-3-carboxaldehyde (2.85 g, 12.1 mmol). The resulting mixture was allowed to stir at room temperature for 20 minutes; then $NaBH_3CN$ (1.98 g, 31.5 mmol) was added in one portion. The suspension was allowed to stir at room temperature for 18 hours, then was concentrated in vacuo to furnish a sticky white semi-solid. The crude reaction mixture was partitioned between 20% aqueous NaOH (0.25 L) and EtOAc (0.25 L); the organic phase was separated, washed with brine (0.25 L), and dried (Na_2SO_4). Concentration in vacuo afforded the crude product as a pale green oil which was purified by chromatography on a column of silica gel (230-400 mesh, 500 g, 70 mm o.d., EtOAc-hexanes 25:75, 400 mL fractions) using the flash technique. Fractions 8-13 were combined to provide 2.0g (43%) of the title compound as a white solid. Recrystallization from EtOAc-hexanes provided white needles, m.p. 109-110° C.

Physical characteristics are as follows:

TLC (Merck; EtOAc-hexanes, 25:75).

UV (+); ammonium molybdate) R_f = 0.48.

1H -NMR: δ = 7.67 (d, J = 7.23Hz, 1), 7.05-7.45 (15), 5.28 (s,2), 4.49 (s, 1), 3.94 (s, 2), 3.67 (s, 3).

Infrared (nujol): 2925, 2855, 1733, 1453, 1442, 1333, 1208, 1176, 790, and 737 cm^{-1} .

EI/MS (70eV): 384 (M+, 17.8), 325 (6.0), 235 (7.9), 220 (base), 129 (14.2), 91 (75.8).

Analysis: Calcd. for $C_{25}H_{24}N_2O_2$: C, 78.10; H, 6.29; N, 7.29. Found: C, 78.07; H, 6.48, N, 7.23.

Example 32 Methyl (R)- α -(1-phenylmethyl-3-indolylmethyl)aminophenylacetate

According to the general procedure described for the preparation of Example 31, methyl (R)-phenylglycinate-hydrochloride (4.00 g, 19.8 mmol), 1-benzyl-indole-3-carboxaldehyde (2.33 g, 9.9 mmol) and $NaBH_3CH$ (0.81 g, 12.9 mmol) provided crude title compound as a pale yellow oil. The crude material was purified by chromatography on a column of silica gel (230-400 mesh, 500 g, 70mm o.d., packed-ethyl acetate-hexanes 20:80, eluted ethyl acetate-hexanes 25:75, 400 mL fractions) using the flash technique. Fractions 8-13 provided 2.82 g (74%) of the title compound as a pale yellow oil which slowly crystallized to an ivory solid, m.p. 72-75 °C.

Physical characteristics are as follows:

TLC (Merck; EtOAc-hexanes, 35:65.

UV(+); ammonium molybdate) R_f = 0.30.

1H -NMR: δ = 7.67 (d, J = 7.23Hz, 1), 7.05-7.45 (15), 5.27 (s, 2), 4.48 (s, 1), 3.94 (s, 2), 3.66 (s, 3).

^{13}C -NMR: δ = 173.1, 138.1, 137.5, 136.6, 128.7, 128.6, 128.0, 127.6, 126.8, 121.9, 119.3, 113.5, 109.7, 64.6, 52.1, 49.9, 42.5.

Infrared (nujol): 2924, 2855, 1733, 1453, 1443, 1333, 1208, 1176, 790, and 737 cm^{-1} .

EI/MS (70eV): 384 (M+, 11.9), 325 (6.1), 235 (8.0), 220 (base), 129 (10.9), 91 (76.5).

Analysis: Calcd. for $C_{25}H_{24}N_2O_2$: C, 78.10; H, 6.29; N, 7.29. Found: C, 77.82; H, 6.15, N, 7.28.

Example 33 Methyl (S)- α -(1-phenylmethyl-3-indolylmethyl)amino phenylacetate

According to the general procedure described for the preparation of Example 31, methyl (S)-phenylglycinate-hydrochloride (4.00 g, 19.8 mmol), 1-benzyl-indole-3-carboxaldehyde (2.33 g, 9.9 mmol) and $NaBH_3CN$ (0.81 g, 12.9 mmol) provided crude title compound as a pale yellow oil. The crude material was purified by chromatography on a column of silica gel (230-400 mesh, 500 g, 70mm o.d., packed-ethyl acetate-hexanes 20:80, eluted ethyl acetate-hexanes 25:75, 400 mL fractions) using the flash technique. Fractions 7-12 provided 1.44 g (38%) of the title compound as a clear, pale yellow oil.

Physical characteristics are as follows:

TLC (Merck; EtOAc-hexanes, 35:65.

UV(+); ammonium molybdate) R_f = 0.30.

1H -NMR: δ = 7.67 (d, J = 7.23Hz, 1), 7.05-7.45 (15), 5.24 (s,2), 4.48 (s, 1), 3.97 (s, 2), 3.66 (s, 3).

^{13}C -NMR: δ = 173.1, 138.1, 137.5, 136.6, 128.7, 128.6, 128.0, 127.6, 126.8, 121.9, 119.3, 113.5, 109.7, 64.6, 52.1, 49.9, 42.5.

Infrared (nujol): 2954, 2855, 1734, 1453, 1443, 1333, 1208, 1176, 790, and 737 cm^{-1} .

EI/MS (70eV): 384 (M+, 12.4), 325 (6.9), 235 (8.3), 220 (base), 129 (9.5), 91 (70.4).

Analysis: Calcd. for $C_{25}H_{24}N_2O_2$: C, 78.10; H, 6.29; N, 7.29. Found: C, 77.79; H, 6.47, N, 7.24.

Example 34 Methyl (+/-)- α -(1-phenylmethyl-3-indolylmethyl)amino-(3-trifluoromethylphenyl)acetate

According to the general procedure described for the preparation of Example 31, (+/-)-3-trifluoromethyl-phenylglycine methyl ester (2.74 g, 11.8 mmol), 1-benzyl-indole-3-carboxaldehyde (1.38 g, 5.88 mmol) and $NaBH_3CN$ (0.48 g, 7.64 mmol) provided crude title compound as a clear, pale yellow oil. The crude material was purified by chromatography on a column of silica gel (230-400 mesh, 500 g, 70 mm o.d., ethyl acetate-hexanes 25:75, 400 mL fractions) using the flash technique. Fractions 8-12 afforded 2.29 g (86%) of the title compound as a clear, pale yellow oil.

Physical characteristics are as follows:

TLC (Merck; EtOAc-hexanes, 50:50.

UV(+); ammonium molybdate) R_f = 0.12.

1H -NMR: δ = 7.00-7.70 (14), 5.26 (s, 2), 4.53 (s, 1), 3.97 (d, J = 13.3Hz, 1), 3.92 (d, J = 13.3Hz, 1), 3.66 (s, 3), 2.31 (br, 1).

^{13}C -NMR: δ = 173.0, 139.7, 137.4, 136.7, 131.1, 130.5, 129.1, 128.7, 127.7, 127.0, 126.9, 124.9, 124.6, 122.0, 119.2, 112.4, 109.8, 64.0, 52.4, 50.0, 42.6.

Infrared ($CHCl_3$): 3060, 3032, 2954, 2925, 1739, 1496, 1467, 1454, 1437, 1331, 1200, 1167, 1125, 1074.

812, 790, and 742 cm^{-1} .

EI/MS (70eV): 452 (M^+ , 20.7), 235 (10.6), 220 (base), 129 (16.8), 91 (96.6).

Analysis: Calcd. for $\text{C}_{26}\text{H}_{23}\text{F}_3\text{N}_2\text{O}_2$: C, 69.02; H, 5.12; N, 6.19. Found: C, 68.79; H, 5.19, N, 6.09.

5

Example 35 Methyl (R)- α -(3-indolylmethyl)amino-phenylacetate

According to the general procedure described for the preparation of Example 31, methyl (R)-phenylglycinate-hydrochloride (2.50 g, 12.4 mmol), indole-3-carboxaldehyde (0.81 g, 6.2 mmol) and
 10 NaBH_3CN (0.51 g, 8.06 mmol) provided crude title compound as a cloudy, pale brown oil. The crude material was purified by chromatography on a column of silica gel (230-400 mesh, 400 g, 70 mm o.d., packed-ethyl acetate-hexanes (10:90, eluted ethyl acetate-hexanes (10:90 2 L), (20:80, 2 L), (30: 70, 2 L), (40:60, 2 L), (50:50, 2 L), (60:40, 2 L), 400 mL fractions) using the flash technique. Fractions 28-29 provided 0.19 g (10%) of the title compound as a tan solid, m.p. 115-118° C.

15 Physical characteristics are as follows:

TLC (Merck; EtOAc-hexanes, 35:65.

UV(+); ammonium molybdate) R_f = 0.15.

$^1\text{H-NMR}$: δ = 8.20 (brs, 1), 7.65 (d, J = 7.7Hz, 1), 7.0-7.45 (9), 4.49 (s, 2), 3.94 (s, 2), 3.66 (s, 3), 2.16 (br, 1).

20 $^{13}\text{C-NMR}$: δ = 173.7, 138.1, 136.5, 128.7, 128.1, 127.7, 126.9, 122.9, 122.1, 119.6, 119.0, 114.0, 111.2, 64.6, 52.2, 42.6.

Infrared (CHCl_3): 2955, 2925, 2871, 2857, 1733, 1717, 1456, 1452, 1435, 1347, 1283, 1242, 1171, 1108, 1017, 838, 744, and 737 cm^{-1} .

EI/MS (70eV): 294 (M^+ , 8.1), 235 (22.2), 130 (base), 106 (62.8).

25 Analysis: Calcd. for $\text{C}_{18}\text{H}_{18}\text{N}_2\text{O}_2$: C, 73.45; H, 6.16; N, 9.52. Found: C, 73.46; H, 6.37, N, 9.49.

Example 36 Methyl (S)- α -(3-indolylmethyl)amino-phenylacetate

30 According to the general procedure described for the preparation of Example 31, methyl (S)-phenylglycinate-hydrochloride (2.50 g, 12.4 mmol), indole-3-carboxaldehyde (0.81 g, 6.2 mmol) and NaBH_3CN (0.51 g, 8.06 mmol) provided crude title compound as a cloudy, pale brown oil. The crude material was purified by chromatography on a column of silica gel (230-400 mesh, 400 g, 70 mm o.d., packed-ethyl acetate-hexanes 30:70, eluted ethyl acetate-hexanes 40:60, 400 mL fractions) using the flash
 35 technique. Fractions 12-13 provided 0.13 provided 0.13 g (7%) of the title compound as a tan solid, m.p. 120° C (dec.). Physical characteristics are as follows:

TLC (Merck; EtOAc-hexanes, 35:65.

UV(+); ammonium molybdate) R_f = 0.15.

40 $^1\text{H-NMR}$: δ = 8.15 (brs, 1), 7.65 (d, J = 7.7Hz, 1), 7.0-7.45 (9), 4.49 (s, 2), 3.94 (s, 2), 3.67 (s, 3), 1.97 (br, 1).

$^{13}\text{C-NMR}$: δ = 173.5, 138.4, 135.5, 128.4, 127.8, 127.4, 126.7, 122.6, 121.9, 119.3, 118.8, 113.7, 110.9, 64.2, 51.8, 42.3.

Infrared (nujol): 2953, 2926, 2868, 2855, 1727, 1694, 1455, 1429, 1349, 1281, 1171, 1108, 1017, 834, and 743 cm^{-1} .

45 EI/MS (70eV): 294 (M^+ , 5.7), 235 (21.8), 130 (base), 106 (77.6).

Analysis: Calcd. for $\text{C}_{18}\text{H}_{18}\text{N}_2\text{O}_2$: C, 73.45; H, 6.16; N, 9.52. Found: C, 73.43; H, 6.31, N, 9.60.

Example 37 Methyl (+/-)- α -(1-phenylmethyl-5-methoxy-3-indolylmethyl)amino-(3-trifluoromethylphenyl)-acetate

50 According to the general procedure described for the preparation of Exmple 31, (+/-)-3-trifluoromethyl-phenylglycine methyl ester (2.66 g, 11.4 mmol), 1-benzyl-5-methoxyindole-3-carboxaldehyde (1.00 g, 5.71 mmol) and NaBH_3CN (0.47 g, 7.42 mmol) provided crude title compound as a clear, pale yellow oil. The
 55 crude material was purified by chromatography on a column of silica gel (230-400 mesh, 500 g, 70 mm o.d., ethyl acetate-hexanes 35:65, 400 mL fractions) using the flash technique. Fractions 4-5 afforded 1.22 g (54%) of the title compound as a clear, viscous, pale yellow oil.

Physical characteristics are as follows:

TLC (Merck; EtOAc-hexanes, 35:65).

UV(+); ammonium molybdate) Rf = 0.35.

¹H-NMR: δ = 7.69 (s, 1), 7.57 (brt, J = 8Hz, 2), 7.45 (t, J = 8Hz, 1), 7.27 (m, 3), 7.11 (m, 4), 7.00 (s, 1), 6.83 (dd, J = 8.8, 2.5Hz, 1), 5.23 (s, 2), 4.54 (s, 1), 3.91 (brs, 2), 3.84 (s, 3), 3.68 (s, 3).

¹³C-NMR: δ = 172.7, 154.0, 139.3, 137.6, 132.2, 130.9, 128.9, 128.6, 127.5, 126.7, 125.0, 124.6, 112.2, 110.5, 100.8, 63.9, 55.7, 52.3, 50.1, 42.6.

Infrared (CHCl₃): 2952, 2926, 2835, 1738, 1621, 1581, 1488, 1453, 1437, 1354, 1330, 1261, 1227, 1207, 1167, 1125, 1098, 1074, 1042, 796, 780, 736, and 702 cm⁻¹.

¹⁰ EI/MS (70eV): 482 (M⁺, 22.9), 250 (base), 159 (16.2), 91 (86.1).

Analysis: Calcd. for C₂₇H₂₅F₃N₂O₃: C, 67.21; H, 5.22; N, 5.81. Found: C, 67.27; H, 5.30; N, 5.86.

Example 38 Methyl-(+/-)-a-(5-methoxy-3-indolylmethyl)amino-(3-trifluoromethylphenyl)acetate

¹⁵ According to the general procedure described for the preparation of Example 31, (+/-)-3-trifluoromethyl-phenylglycine methyl ester (5.99 g, 25.7 mmol), 5-methoxyindole-3-carboxaldehyde (1.50 g, 8.56 mmol) and NaBH₃CN (0.70 g, 11.1 mmol) provided crude title compound as a clear, pale yellow oil. The crude material was purified by chromatography on a column of silica gel (230-400 mesh, 500 g, 70 mm o.d., packed ethyl acetate-hexanes 30:70, eluted ethyl acetate-hexanes 40:60, 400 mL fractions) using the flash technique.

²⁰ Fractions 5-8 afforded 2.50 g (74%) of the title compound as a clear, viscous, pale yellow oil.

Physical characteristics are as follows:

TLC (Merck; EtOAc-hexanes, 50:50).

UV(+); ammonium molybdate) Rf = 0.35.

²⁵ ¹H-NMR: δ = 7.70 (s, 1), 7.57 (dd, J = 10.0, 7.6Hz, 2), 7.45 (m, 2), 7.21 (d, J = 8.80Hz, 1), 7.21 (dd, J = 11.2, 2.46Hz, 1), 6.86 (dd, J = 8.80, 2.46Hz, 1), 4.54 (s, 1), 3.91 (s, 2), 3.84 (s, 3), 3.68 (s, 3).

¹³C-NMR: δ = 172.8, 154.0, 139.3, 131.4, 130.9, 129.0, 127.3, 124.8, 124.4, 123.6, 122.3, 113.4, 112.5, 111.8, 100.6, 63.9, 55.7, 52.3, 50.1, 42.7.

Infrared (CHCl₃): 3409, 2953, 2833, 1738, 16214, 1586, 1487, 1454, 1441, 1331, 1301, 1239, 1214, 1167,

³⁰ 1125, 1098, 1073, 1028, 922, 831, 800, and 703 cm⁻¹.

EI/MS (70eV): 392 (M⁺, 7.2), 174 (9.3), 160 (base), 145 (12.1), 117 (10.5).

Analysis: Calcd. for C₂₇H₂₅F₃N₂O₃: 392.1348. Found: 392.1336.

³⁵ Example 39 Methyl (R)-a-(1-phenylmethyl-5-methoxy-3-indolylmethyl)amino-phenylacetate

⁴⁰ According to the general procedure described for the preparation of Example 31, methyl (R)-phenylglycinate-hydrochloride (1.52 g, 7.54 mmol), 1-benzyl-5-methoxy-indole-3-carboxaldehyde (1.00 g, 3.77 mmol) and NaBH₃CN (0.31 g, 4.91 mmol) provided crude title compound as a pale yellow oil. The crude material was purified by chromatography on a column of silica gel (230-400 mesh, 500 g, 70 mm o.d., ethyl acetate-hexanes 35:65, 400 mL fractions) using the flash technique. Fractions 6-10 provided 0.74 g (47%) of the title compound as a pale yellow, viscous oil.

Physical characteristics are as follows:

TLC (Merck; EtOAc-hexanes, 35:65).

⁴⁵ UV(+); ammonium molybdate) Rf = 0.27.

¹H-NMR: δ = 7.05-7.45 (12), 7.02 (s, 1), 6.82 (dd, J = 8.8, 2.5Hz, 1), 5.22 (s, 2), 4.49 (s, 1), 3.90 (s, 2), 3.83 (s, 3), 3.67 (s, 3), 2.08 (br, 1).

¹³C-NMR: δ = 173.6, 154.2, 138.3, 137.3, 132.0, 128.6, 128.5, 127.9, 127.5, 127.4, 126.7, 112.3, 112.1, 110.4, 100.9, 64.4, 55.7, 52.0, 50.1, 42.4.

⁵⁰ Infrared (CHCl₃): 3030, 2950, 2924, 1736, 1581, 1488, 1453, 1436, 1313, 1262, 1227, 1210, 1176, 1130, 1041, 1029, 796, 778, 735, and 702 cm⁻¹.

EI/MS (70eV): 414 (M⁺, 18.0), 250 (base), 91 (63.5).

Analysis: Calcd. for C₂₆H₂₆N₂O₃: C, 75.34; H, 6.32; N, 6.76. Found: C, 75.12; H, 6.48; N, 6.78.

⁵⁵ Example 40 Methyl-(S)-a-(1-phenylmethyl-5-methoxy-3-indolylmethyl)amino-phenylacetate

According to the general procedure described for the preparation of Example 31, methyl (S)-

phenylglycinate-hydrochloride (3.04 g, 15.1 mmol), 1-benzyl-5-methoxy-indole-3-carboxaldehyde (2.00 g, 7.54 mmol) and NaBH_3CN (0.62 g, 9.80 mmol) provided crude title compound as a pale yellow oil. The crude material was purified by chromatography on a column of silica gel (230-400 mesh, 500 g, 70 mm o.d., packed ethyl acetate-hexanes 25:75, eluted ethyl acetate-hexanes 30:70, 400 mL fractions) using the flash technique. Fractions 8-14 provided 2.18 g (70%) of the title compound as a pale yellow, viscous oil.

Physical characteristics are as follows:

TLC (Merck; EtOAc-hexanes, 50:50).

UV(+); ammonium molybdate) $R_f = 0.42$.

$^1\text{H-NMR}$: $\delta = 7.05\text{--}7.45$ (12), 7.02 (s, 1), 6.82 (dd, $J = 8.8, 2.5\text{Hz}$, 1), 5.21 (s, 2), 4.49 (s, 1), 3.90 (s, 2), 3.83 (s, 3), 3.66 (s, 3), 2.23 (br, 1).

$^{13}\text{C-NMR}$: $\delta = 173.5, 153.8, 138.2, 137.5, 132.0, 128.6, 128.5, 127.9, 127.6, 127.5, 126.7, 112.7, 112.1, 110.4, 100.9, 64.4, 55.7, 52.1, 50.0, 42.5$.

Infrared (CHCl_3): 3030, 2950, 2925, 1735, 1581, 1488, 1453, 1436, 1313, 1262, 1227, 1209, 1176, 1130, 1042, 1029, 796, 778, 735, and 700 cm^{-1} .

EL/MS (70eV): 414 (M^+ , 15.5), 250 (base), 91 (63.5).

Analysis: Calcd. for $\text{C}_{25}\text{H}_{26}\text{N}_2\text{O}_3$: C, 75.34; H, 6.32; N, 6.76. Found: C, 75.06; H, 6.22, N, 6.80.

The compounds of this invention are useful as anti-diabetic, anti-obesity and anti-atherosclerotic agents. While all of the compounds do not have all of the activities the utility of a particular compound can be determined by one skilled in the art utilizing the various tests.

Anti-diabetic

A. Testing For Blood Glucose Lowering In the KKA^y Mouse

All KKA^y mice used for screening are produced and selected by methods outlined by T. Fujita et al., Diabetes, 32, pp. 804-10 (1983). The screening is done in groups of six animals per group.

Pre-treatment non-fasting blood glucose (NFBG) samples are measured five days prior to the start of a screening run by previously described methodologies. These blood sugar values are used to place animals into groups with equal mean blood glucose concentrations and to eliminate any mice with a NFBG value <250 mg/dl. On day 0, compounds chosen to be run are incorporated into ground mouse chow (Purina 5015). Compounds are included at a rate of 1 mg/gram of chow. Generally, 300 g of drugs containing diet is prepared for each group. Mice receiving ground chow only are the negative control.

Each screening run also uses ciglitazone (T. Fujita et al., supra) as a positive control (0.5 to 1.0 mg/gram chow).

Initial body and food weights are taken on day one. Food is placed in a crock which contains an adequate amount to last for the length of the study. In order to acclimate the mice from pelleted mouse chow to ground mouse chow, they are fed the ground chow for nine days prior to use in the screen. On day four of treatment, a NFBG sample is again measured, as well as food and body weights. Food consumption measurements are used to determine an average mg/kg dose the mice received over the testing period, and to evaluate the compound's effect on food consumption.

Acceptance and activity are determined by the following criteria:

A. Negative Control

This group must not show a significant change ($p < .05$) from pre- to post-treatment. If there is a significant decrease in blood sugar, the run is not valid.

B. Positive Control

This group must show a significant depression in blood sugar mean levels from pre- to post-treatment. A lack of activity in this group would also invalidate the run.

C. Negative Control vs. Positive Control

This contrast must be significant. It is a further assurance that both control groups perform d as expected.

5 D. Compound

A compound's activity is based on several criteria:

1. A significant decrease in blood sugar mean levels from pre- to post-treatment.
 2. Negative control vs. compound: This contrast allows one to determine if these groups are
- 10 dissimilar, which is required for the compound to be considered active.

II. Anti-obesity Activity

15 Upjohn Sprague-Dawley rats are housed individually and given food and water ad libitum. Food consumption is measured daily. The animals are orally dosed with 100 mg/kg or 200 mg/kg of the compound in Tween 80. Controls receive an equivalent volume of Tween 80. If the daily food consumption of the treated animals is in the range of 4 grams less than that of the control animals the compound is considered to have anorexic activity.

III. Anti-atherosclerotic activity

25 Normocholesterolemic Quail Lipoprotein Test

Male SEA Japanese quail, approximately four to six weeks of age are used from a colony of animals originally derived at The Upjohn Company. Prior to drug testing, birds are randomly distributed into 10-15 groups of 10 quail each. They are housed individually in 10-cage units and fed a commercial diet (Purina Game Bird Layena, Ralston Purina Co., St. Louis, MO) for seven days. Compound (0.5 g for 50 mg/kg dose,

30 0.15 g for 15 mg/kg dose, 0.05 g for 5 mg/kg dose, etc.) are dissolved or dispersed in 50 mL of 95% ethanol and mixed with 1.2 kg of the diet. Control groups receive diet mixed with ethanol alone, and positive control groups receive diet mixed with 1-propyl-2(1H)-pyridinone at 50 mg/kg.

After one week on the diets, each bird is bled from the right jugular vein and serum samples are obtained after low speed centrifugation. Food intake is determined for each group by subtracting the weight of diet remaining at the end of the experiment from the weight of the starting diet.

Beta- and alpha-lipoproteins are isolated from individual serum samples using PEG-8000 and glycine buffer, pH 9. Three hundred microliters of serum are mixed with 300 microliters of solution A (20 gram of PEG-8000 + 100 mL of glycine buffer, pH 9) using a Micromedex automatic pipette. Samples are allowed to

40 stand at room temperature for 10 minutes and are centrifuged for 20 minutes at 2000 x g at 4°C. The beta-lipoprotein pellet is dissolved in 300 microliters of solution B (10 mL Triton X-100 + 1000 mL Milli Q water). Cholesterol, triglycerides and total protein in alpha- and beta-lipoproteins are measured using the Demand Autoanalyzer system Model AU 500 (Cooper Biomedical Inc.) and Worthington Demand Enzymatic reagents (Pearson, G.W. et al, Biometrika 38, (1951) pp. 112-130).

45 All data is statistically analyzed using a one-way classification design. All values are transformed to logarithms to achieve more homogenous within-group variances. The mean response for each test compound is compared with the mean observed in the control animals by the LSD test (Snedecor, G.W. et al (1969), Statistical Methods, ISV Press, Ames, Iowa, pp. 258-296). Treated/control ratios of antilogs of the log are presented. A P-value less than 0.004 is significantly different from control.

50 Compounds that reduce beta-lipoproteins and/or increase alpha-lipoproteins are considered to be indicative of anti-atherosclerotic activity.

- a + signifies a T/C value of 0.85 or lower.
 - signifies a T/C value of 0.85 or higher.
- 30 b + signifies a T/C stage 1 x T/C stage 2 value of 0.61 or lower.
 - signifies a T/C stage 1 x T/C stage 2 value of 0.62 or higher.
- 35 c + signifies a significant lowering of blood glucose compared to non-treated control animals.
 ± signifies a modest lowering of blood glucose compared to non-treated control animals.
- 40 - signifies no change or an increase of blood glucose compared to non-treated control animals.
- d ↑ signifies an increase in body weight from before treatment to after treatment.
 ↓ signifies a decrease in body weight from before treatment to after treatment.
- 45 e ↑ signifies an increase in HDL or LDL compared to non-treated control animals.
 ↓ signifies a decrease in HDL or LDL compared to non-treated control animals.
- 50 → signifies no change in HDL or LDL compared to non-treated control animals.
- 55

control animals.

KEY TO NAME OF COMPOUND:

- 5 1. Methyl α -aminoindole-3-acetate
2. Methyl α -[(2-(4-aminosulfonylphenyl)-ethylamino)-indole-3-acetate hydrate (1:1)
- 10 3. Methyl α -[3-(trifluoromethyl)benzylamino]-5-methoxyindole-3-acetate
4. α -[3-(Trifluoromethyl)benzylamino]-1-benzylindole-3-acetic acid
- 15 5. α -[3-(Trifluoromethyl)benzylamino]-1-benzylindole-3-acetic acid hydrochloride
6. Sodium α -[3-(trifluoromethyl)benzyl-amino]-1-benzylindole-3-acetate
- 20 7. Methyl α -[3-(trifluoromethyl)benzylamino]-1-benzylindole-3-acetate hydrochloride
8. α -[3-(Trifluoromethyl)benzylamino]-1-methylindole-3-acetic acid
9. α -Benzylamino-1-benzylindole-3-acetic acid
- 25 10. α -(4-Chlorobenzylamino)-1-benzylindole-3-acetic acid
11. α -[(3-Pyridinylmethyl)amino]-1-benzylindole-3-acetic acid
12. α -(4-Methoxybenzylamino)-1-benzylindole-3-acetic acid
- 30 13. α -[(4-Phenylbutyl)amino]-1-benzylindole-3-acetic acid
14. α -[(S)- α -methylbenzylamino]-1-benzylindole-3-acetic acid
15. α -[3-(Trifluoromethyl)benzylamino]-1-(4-chlorobenzyl)-indole-3-acetic acid
- 35 16. α -[3-(Trifluoromethyl)benzylamino]-1-phenylindole-3-acetic acid
17. N-Benzyl-1-benzyltryptophan hydrate (1:1)
18. N-Benzyl-1-benzyltryptophan methyl ester
- 40 19. N-[3-(Trifluoromethyl)benzyl]-1-benzyltryptophan methyl ester hydrochloride
20. α -[(2-Phenylethyl)amino]-1-benzylindole-3-acetic acid hydrate (1:1)
- 45 21. α -[3-(Trifluoromethyl)benzylamino]-1-benzyl-2-phenylindole-3-acetic acid
22. α -[3-(Trifluoromethyl)benzylamino]-1-benzyl-5-methoxyindole-3-acetic acid
- 50 23. α -(N-Methylbenzylamino)-1-benzylindole-3-acetic acid hydrate (4:1)
- 55 24. α -[3-(Trifluoromethyl)benzylamino]-1-benzyl-5-chloroindole-3-acetic acid

25. Methyl α -[3-(trifluoromethyl)benzylamino]-1-methyl-2-methyl-
indole-3-acetate hydrochloride
- 5 26. Methyl α -[3-(trifluoromethyl)benzylamino]-1-benzyl-2-methyl-
indole-3-acetate hydrochloride
27. α -[3-(Trifluoromethyl)benzylamino]-1-allylindole-3-acetic acid
- 10 28. Ethyl α -[3-(trifluoromethyl)benzylamino]-1-benzylindole-3-
acetate hydrochloride
29. Methyl α -[N-methyl-3-(trifluoromethyl)benzylamino]-1-benzyl-
indole-3-acetate hydrochloride
- 15 30. α -[3-(Trifluoromethyl)benzylamino]indole-3-acetic acid
31. Ethyl α -[3-(Trifluoromethyl)benzylamino]-indole-3-acetate
32. Ethyl α -[3-Trifluoromethyl)benzylamino]-indole-3-acetate
hydrochloride
- 20 33. Benzyl α -[3-(Trifluoromethyl)benzylamino]-1-benzylindole-3-
acetate hydrochloride
34. Ethyl α -[3-(trifluoromethyl)benzylamino]-1-ethoxycarbonylindole-
3-acetate hydrochloride
- 25 35. α -[4-(Trifluoromethyl)benzylamino]-1-benzylindole-3-acetic acid
36. α -[3,5-bis(Trifluoromethyl)benzylamino]-1-benzylindole-3-acetic
acid
- 30 37. α -(4-Methylbenzylamino)-1-benzylindole-3-acetic acid
38. α -[(2-Furylmethyl)amino]-1-benzylindole-3-acetic acid
39. α -[(2-Thienylmethyl)amino]-1-benzylindole-3-acetic acid
- 35 40. α -(3,4-Dichlorobenzylamino)-1-benzylindole-3-acetic acid
41. Methyl α -[3-(trifluoromethyl)benzylamino]-indole-3-acetate
hydrochloride
- 40 42. 4'-Phenylphenacyl α -[3-(trifluoromethyl)benzylamino]-1-benzyl-
indole-3-acetate
43. 3,4,5-Trimethoxybenzyl α -[3-(trifluoromethyl)benzylamino]-1-
benzylindole-3-acetate hydrochloride
- 46 44. α -(3-Fluorobenzylamino)-1-benzylindole-3-acetic acid
45. α -[3-(Trifluoromethyl)benzylamino]-1-benzyl-5-methylindole-3-
acetic acid
- 50 46. α -[3-(Trifluoromethyl)benzylamino]-1-benzyl-5-fluoroindole-3-
acetic acid
47. Ethyl α -[3-(trifluoromethyl)benzylamino]-1-acetylindole-3-
acetate
- 55 49. Ethyl α -[3-(trifluoromethyl)benzylamino]-1-benzoylindole-3-

acetate

Claims

1. A compound of Formula I

wherein R is

- 55
- (a) hydrogen,
 - (b) C₁-C₁₀ alkyl,
 - (c) C₂-C₁₀ alkenyl,
 - (d) C₃-C₁₀ alkynyl,

- (e) phenyl,
- (f) $-C(R_6)H\text{-phenyl}(-R_5)_b$,
- (g) $-SO_2\text{-phenyl}(-R_5)_b$,
- (h) $-C(O)R_1$,
- 5 (i) $-C(O)OR_9$,
- (j) $-(CH_2)_qN(R_7)(R_8)$,
- (k) $-C(O)N(R_7)(R_8)$,
- (l) $-(CH_2)_m\text{ Het}$,
- (m) $-CH_2C(O)R_4$,
- 10 (n) $-(CH_2)_mO(CH_2)CH_3$,
- (o) $-CH_2-(C_3-C_6)\text{cycloalkyl}$,
- (p) $-C_3-C_8\text{ cycloalkyl}$,
- wherein a is 1 to 4,
- b is 1 to 5,
- 15 m is 1 or 2,
- n is 0 or 1,
- p is 4 or 5,
- q is 2 or 3,
- wherein M is a pharmacologically acceptable cation;
- 20 wherein R_1 is
- (a) hydrogen,
- (b) C_1-C_{10} alkyl,
- (c) C_2-C_{10} alkenyl,
- (d) C_2-C_{10} alkynyl,
- 25 (e) $\text{-phenyl}(-R_5)_b$,
- (f) $-CH_2\text{-phenyl}(-R_5)_b$;
- wherein R_2 is
- (a) $-CH(R_6)\text{-phenyl}(-R_5)_b$;
- (b) $-CH_2\text{- Het}$,
- 30 (c) C_1-C_6 alkyl,
- (d) $(CH_2)_b\text{-phenyl}(-R_5)_b$,
- wherein het is a 5- or 6-membered saturated or unsaturated ring containing from one to three heteroatoms (nitrogen, oxygen, sulfur); and including any bicyclic group in which any of the above heterocyclic rings is fused to a benzene ring or another heterocycle;
- 35 wherein R_3 is
- (a) hydrogen,
- (b) $-C(O)R_1$,
- (c) $-C(O)OR_1$,
- (d) $-(CH_2)_b\text{-phenyl}(-R_5)_b$,
- 40 wherein R_4 is
- (a) hydrogen,
- (b) $-C(O)R_9$,
- wherein R_5 same or different is
- (a) hydrogen,
- 45 (b) halogen,
- (c) hydroxy,
- (d) C_1-C_{10} alkoxy,
- (e) C_3-C_{10} alkenyloxy,
- (f) C_3-C_{10} alkynyloxy,
- 50 (g) nitro,
- (h) amino,
- (i) $-N(R_6)(R_7)$,
- (j) $-NHC(O)R_1$,
- (k) $-OC(O)R_1$,
- 55 (l) $-C(O)R_1$,
- (m) trifluoromethyl,
- (n) $-SO_2N(R_6)(R_7)$,
- (o) $-SR_8$.

- (p) $-C\equiv N$,
 (q) $-C(O)OR_6$,
 (r) $-C_1-C_4$ alkyl,
 (s) phenyl,
 5 (t) $-O-CH_2-O$,
 wherein R_6 is
 (a) hydrogen,
 (b) C_1-C_{10} alkyl,
 (c) $-C(O)OR_1$,
 10 (d) phenyl
 wherein R_7 is
 (a) hydrogen,
 (b) C_1-C_{10} alkyl, wherein R_8 is
 (a) hydrogen,
 15 (b) C_1-C_{10} alkyl,
 (c) C_3-C_{10} alkenyl,
 (d) C_3-C_{10} alkynyl,
 (e) phenyl- $(R_5)_b$,
 (f) $-CH_2$ -phenyl- $(R_5)_b$,
 20 (g) CH_2 -het,
 and
 wherein R_9 is
 (a) hydrogen,
 (b) hydroxy,
 25 (c) OM,
 (d) $-OR_8$,
 (e) $-N(R_6)(R_7)$,
 (f) phenyl,
 and pharmacologically acceptable salts of compounds wherein R_9 is not OM; with the proviso that when n
 30 is 0; R_2 is benzyl, substituted benzyl or alkyl substituted benzyl; R is hydrogen, benzyl or substituted
 benzyl; R_1 is hydrogen or methyl; R_3 is hydrogen or methyl; R_5 is hydrogen, benzyloxy or methoxy; and R_6
 is hydrogen, then R_4 cannot be benzyloxycarbonyl, ethoxycarbonyl, or $C(O)OM$;
 with the further proviso that when n is 1; R is hydrogen or methyl; R_1 is hydrogen; R_2 is benzyl; R_3 is
 hydrogen; R_5 is hydrogen; and R_6 is hydrogen, then R_4 cannot be carboxyl or methoxycarbonyl;
 35 with the further proviso that when n is 0; R is hydrogen or 4- substituted benzyl; R_1 is hydrogen or methyl;
 R_2 is C_1-C_4 alkyl; R_3 is hydrogen or C_1-C_2 alkyl; R_5 is hydrogen, methoxy, or benzyloxy; and R_6 is
 hydrogen, then R_4 cannot be ethoxycarbonyl, carboxyl, or propoxycarbonyl;
 with the further proviso that the compound of Formula I is not:
 Methyl α -[N-methyl-N-3-(trifluoromethyl)benzylamino]-1-benzylindole-3-acetate,
 40 Methyl α -[N-methyl-N-3-(trifluoromethyl)benzylamino]-1-benzylindole-3-acetate hydrochloride,
 α -[N-methyl-N-3-(trifluoromethyl)benzylamino]-1-benzylindole-3-acetic acid,
 Methyl α -[3-(trifluoromethyl)benzylamino]indole-3-acetate hydrochloride,
 Ethyl α -[3-(trifluoromethyl)benzylamino]indole-3-acetate hydrochloride,
 α -[3-(Trifluoromethyl)benzylamino]-1-benzylindole-3-acetic acid p-phenylphenacyl ester,
 45 α -[3-(Trifluoromethyl)benzylamino]-1-benzylindole-3-acetic acid 1-methyl-3-butenyl ester,
 2 - [3-(Trifluoromethyl)benzylamino] -2- (1-benzyl-3-indolyl)ethanol,
 Methyl α -[3-(trifluoromethyl)benzylamino]-1-acetoxymethylindole-3-acetate,
 Methyl α -[3-(trifluoromethyl)benzylamino]-1-acetoxymethylindole-3-acetate hydrochloride,
 Methyl α -(benzylamino)-indole-3-acetate,
 50 α -(Phenylpropylamino)-1-benzylindole-3-acetic acid,
 Methyl α -[4-(aminosulfonyl)phenylethylamino]-indole-3-acetate,
 α -Methylamino-1-benzylindole-3-acetic acid,
 α -(Phenylethylamino)-1-benzylindole-3-acetic acid,
 α -[4-(Aminosulfonyl)phenylethylamino]-1-benzylindole-3-acetic acid,
 55 α -[(Tetrahydro-2-furanyl)methylamino]-1-benzylindole-3-acetic acid,
 α -[3-(Trifluoromethyl)benzylamino]-1-benzylindole-3-acetic acid N,N-dimethylamide,
 Ethyl α -[3-(trifluoromethyl)benzylamino]-indole-3-acetate,
 α -[(2-Furylmethyl)amino]-indole-3-acetic acid,

- α -Benzylamino-indole-3-acetic acid,
 α -[3-(Trifluoromethyl)benzylamino]-1-benzylindole-3-acetic acid,
 α -[4-(Methoxycarbonyl)benzylamino]-1-benzylindole-3-acetic acid,
 Methyl α -[3-(trifluoromethyl)benzylamino]-1-acetoxymethylindole-3-acetate,
 5 Methyl α -[3-(trifluoromethyl)benzylamino]-1-acetoxymethylindole-3-acetate hydrochloride.
 2. A compound according to claim 1 having the formula

wherein R , R_1 , R_2 , R_5 and R_9 are the same as in claim 1.

3. A compound according to claim 2 wherein R is hydrogen or benzyl, R is hydrogen, R_2 is trifluoromethylbenzyl or furylmethyl and R_9 is selected from the group consisting of hydroxy, OR_8 and OM wherein R_8 is C_1 - C_{10} alkyl and M is a pharmacologically acceptable cation.
 20

4. A compound according to claim 3 wherein R_2 is trifluoromethylbenzyl.

5. A compound according to claim 4 selected from the group consisting of
 Methyl α -[3-(trifluoromethyl)benzylamino]-5-methoxyindole-3-acetate,
 α -[3-(Trifluoromethyl)benzylamino]-1-benzylindole-3-acetic acid,
 25 α -[3-(Trifluoromethyl)benzylamino]-1-benzylindole-3-acetic acid hydrochloride,
 Sodium α -[3-(trifluoromethyl)benzylamino]-1-benzylindole-3-acetate,
 Methyl α -[3-(trifluoromethyl)benzylamino]-1-benzylindole-3-acetate hydrochloride,
 α -[3-(Trifluoromethyl)benzylamino]-1-phenylindole-3-acetic acid,
 α -[3-(Trifluoromethyl)benzylamino]-1-benzyl-5-methoxyindole-3-acetic acid,
 30 α -[3-(Trifluoromethyl)benzylamino]-1-benzyl-5-chloroindole-3-acetic acid,
 Ethyl α -[3-(trifluoromethyl)benzylamino]-1-benzylindole-3-acetate,
 Ethyl α -[3-(trifluoromethyl)benzylamino]-1-benzylindole-3-acetate oxalate (1:1),
 Ethyl α -[3-(trifluoromethyl)benzylamino]-1-benzylindole-3-acetate hydrochloride,
 α -[3-(Trifluoromethyl)benzylamino]-indole-3-acetic acid,
 35 Ethyl α -[3-(Trifluoromethyl)benzylamino]-indole-3-acetate,
 α -[3-(Trifluoromethyl)benzylamino]-1-benzyl-5-methylindole-3-acetic acid,
 α -[3-(Trifluoromethyl)benzylamino]-1-benzyl-5-methoxy-6-methylindole-3-acetic acid,
 α -[3-(Trifluoromethyl)benzylamino]-1-benzyl-5,6-methylenedioxyindole-3-acetic acid,
 α -[3-(Trifluoromethyl)benzylamino]-1-benzyl-5-methoxy-6-isopropylindole-3-acetic acid,
 40 α -[3-(Trifluoromethyl)benzylamino]-1-benzyl-5-methoxy-4-methylindole-3-acetic acid,
 α -[3-(Trifluoromethyl)benzylamino]-1-benzyl-5-methoxy-6-chloroindole-3-acetic acid,
 α -[3-(Trifluoromethyl)benzylamino]-1-benzyl-6-methylindole-3-acetic acid,
 α -[3-(Trifluoromethyl)benzylamino]-1-benzyl-5,6-dimethoxyindole-3-acetic acid,
 α -[3-(Trifluoromethyl)benzylamino]-1-benzyl-5-methoxy-7-methylindole-3-acetic acid,
 45 α -[3-(Trifluoromethyl)benzylamino]-1-benzyl-6-methoxyindole-3-acetic acid,
 α -[3-(Trifluoromethyl)benzylamino]-1-benzyl-5-acetoxymethylindole-3-acetic acid,
 α -[3-(Trifluoromethyl)benzylamino]-1-benzyl-5-hydroxyindole-3-acetic acid,
 α -[3-(Trifluoromethyl)benzylamino]-1-benzyl-5-ethoxyindole-3-acetic acid,
 α -[3-(Trifluoromethyl)benzylamino]-1-benzyl-5-benzoyloxyindole-3-acetic acid,
 50 α -[3-(Trifluoromethyl)benzylamino]-1-benzyl-5-methoxyindole-3-acetic acid,
 Ethyl α -[3-(trifluoromethyl)benzylamino]-1-benzylindole-3-acetate maleic acid salt,
 α -[3-(Trifluoromethyl)benzylamino]-indole-3-acetate hydrochloride,
 α -[3-(Trifluoromethyl)benzylamino]-1-benzyl-5-fluoroindole-3-acetic acid,
 α -[3-(Trifluoromethyl)benzylamino]-1-benzylindole-3-acetic acid 1-methyl-3-butenyl ester.
 55 6. A compound according to claim 5, α -[3-(trifluoromethyl)benzylamino]-1-benzylindole-5-methoxyindole-3-acetic acid.

7. A compound according to claim 5, α -[3-(trifluoromethyl)benzylamino]-indole-3-acetic acid.

8. A compound according to claim 5, methyl α -[3-(trifluoromethyl)benzylamino]-1-benzylindole-3-acetate

hydrochloride.

9. A compound according to claim 3, wherein R₂ is furylmethyl.

10. A compound according to claim 9, α-[(2-furylmethyl)amino]-1-benzylindole-3-acetic acid.

11. A compound according to claim 2 selected from the group consisting of

- 5 α-Benzylamino-1-benzylindole-3-acetic acid,
α-[(3-Pyridinylmethyl)amino]-1-benzylindole-3-acetic acid,
α-(4-Methoxybenzylamino)-1-benzylindole-3-acetic acid,
α-[(Phenylbutyl)amino]-1-benzylindole-3-acetic acid,
α-[(S)-α-methylbenzylamino]-1-benzylindole-3-acetic acid,
10 α-(N-Methylbenzylamino)-1-benzylindole-3-acetic acid hydrate (4:1),
α-(3-Chlorobenzylamino)-1-benzylindole-3-acetic acid,
α-(2-Chlorobenzylamino)-1-benzylindole-3-acetic acid,
α-[(2-Thienylmethyl)amino]-1-benzylindole-3-acetic acid,
α-(3-Fluorobenzylamino)-1-benzylindole-3-acetic acid,
15 α-(4-Fluorobenzylamino)-1-benzylindole-3-acetic acid,
α-(3-Methoxybenzylamino)-1-benzylindole-3-acetic acid,
α-(3-Methylbenzylamino)-1-benzylindole-3-acetic acid,
α-(3,4-Dichlorobenzylamino)-1-benzylindole-3-acetic acid
α-(Diphenylmethylamino)-indole-3-acetic acid hydrate (1:0:7).
20 12. A compound according to claim 1 having the formula

30 wherein R, R₁, R₂, R₃, R₄, R₅ and R₆ are the same as in claim 1.

13. A compound according to claim 12 selected from the group consisting of
N-Benzyl-1-benzyltryptophan hydrate (1:1),
N-Benzyl-1-benzyltryptophan methyl ester,
35 N-(Dibenzyl)-1-benzyltryptophan methyl ester,
N-[3-(Trifluoromethyl)benzyl]-1-benzyltryptophan hydrate (1:1),
N-[3-(Trifluoromethyl)benzyl]-1-benzyltryptophan methyl ester,
N-[3-(Trifluoromethyl)benzyl]-1-benzyltryptophan methyl ester hydrochloride,
N-(Isopropyl)-1-benzyltryptophan methyl ester,
40 N-(Isopropyl)-1-benzyltryptophan methyl ester hydrochloride,
1-phenylmethyl-N-3-(trifluoromethyl)phenylmethyl-L-tryptophan methyl ester,
DL-methyl-1-(phenylmethyl)-tryptophan-methyl ester monohydrochloride,
DL-N-1-bis(phenylmethyl)-tryptophan-methyl ester,
DL-1-(phenylmethyl)-tryptophan-N-[[3-(trifluoromethyl)phenyl]methyl]methyl ester,
45 DL-N-(1-methylethyl)-tryptophan-1-(phenylmethyl)methyl ester,
DL-N-(1-methylethyl)-1-(phenylmethyl)-tryptophan-methyl ester, monohydrochloride,
DL-1-(phenylmethyl)-N-[[[3-(trifluoromethyl)phenyl]methyl]-tryptophan-methyl ester, monohydrochloride,
DL-N-1-bis(phenylmethyl)-tryptophan,
DL-1-(phenylmethyl)-N-[[3-(trifluoromethyl)phenyl]methyl]-tryptophan,
50 DL-N-[[3-(trifluoromethyl)phenyl]methyl]-tryptophan methyl ester,
DL-1-p(4-chlorophenyl)methyl-N-[[3-(trifluoromethyl)phenyl]methyl]-tryptophan methyl ester,
DL-1-[(4-chlorophenyl)methyl]-N-[[3-(trifluoromethyl)phenyl]methyl]-tryptophan methyl ester,
DL-N-[[[3-(trifluoromethyl)phenyl]methyl]-tryptophan methyl ester, monohydrochloride,
DL-1-(ethylthio)carbonyl-N-[[3-(trifluoromethyl)phenyl]methyl]-tryptophan,
55 DL-1-(ethylthiocarbonyl)-N-[[3-(trifluoromethyl)phenyl]methyl]-tryptophan monohydrochloride,
DL-1-(ethoxycarbonyl)-N-[[3-(trifluoromethyl)phenyl]methyl]-tryptophan methyl ester,
DL-1-(thoxycarbonyl)-N-[[3-(trifluoromethyl)phenyl]methyl]-tryptophan methyl ester, monohydrochloride,
DL-N-[[3-(trifluoromethyl)phenyl]methyl]-tryptophan,

D-1-(phenylmethyl)-N-[[3-(trifluoromethyl)phenyl]methyl]-tryptophan methyl ester,
 D-1-(phenylmethyl)-N-[[3-(trifluoromethyl)phenyl]methyl]-tryptophan-methyl ester monohydrochloride,
 (D,L)-1-ethylthiocarboxy-N-(3-(trifluoromethyl)phenyl)methyl-tryptophan methyl ester,
 (D,L)-1-ethylthiocarboxy-N-(3-(trifluoromethyl)phenyl)methyl-tryptophan methyl ester HCl,

14. A compound according to claim 1 having the formula

wherein R, R₁, R₂ and R₅ are the same as in claim 1.

15. A compound according to claim 14 selected from the group of
 Methyl (±)-α-(1-phenylmethyl-3-indolylmethyl)amino-phenylacetate,

Methyl (R)-α-(1-phenylmethyl-3-indolylmethyl)amino-phenylacetate,

Methyl (S)-α-(1-phenylmethyl-3-indolylmethyl)amino-phwnylacetate,

Methyl (±)-α-(1-phenylmethyl-3-indolylmethyl)amino-(3-trifluoromethylphenyl)acetate,

Methyl (R)-α-(3-indolylmethyl)amino-phenylacetate,

Methyl (S)-α-(3-indolylmethyl)amino-phenylacetate,

Methyl (±)-α-(1-phenylmethyl-5-methoxy-3-indolylmethyl)amino-(3-trifluoromethylphenyl)acetate,

Methyl (±)-α-(5-methoxy-3-indolylmethyl)amino-(3-trifluoromethylphenyl)acetate,

Methyl (R)-α-(1-phenylmethyl-5-methoxy-3-indolylmethyl)aminophenylacetate, and

Methyl (S)-α-(1-phenylmethyl-5-methoxy-3-indolylmethyl)aminophenylacetate.

European Patent
Office

PARTIAL EUROPEAN SEARCH REPORT
which under Rule 45 of the European Patent Convention
shall be considered, for the purposes of subsequent
proceedings, as the European search report

Application number
EP 89 31 1539

DOCUMENTS CONSIDERED TO BE RELEVANT			
Category	Citation of document with indication, where appropriate, of relevant passages	Relevant to claim	CLASSIFICATION OF THE APPLICATION (Int. Cl. 4)
X	EP-A-0 031 653 (BEECHAM GROUP LTD) * Pages 25,26: examples 14,15 * --	1,2,12	C 07 D 209/26 C 07 D 209/22 C 07 D 209/24 C 07 D 209/20 C 07 D 401/12 C 07 D 405/12

INCOMPLETE SEARCH			
<p>The Search Division considers that the present European patent application does not comply with the provisions of the European Patent Convention to such an extent that it is not possible to carry out a meaningful search into the state of the art on the basis of some of the claims.</p> <p>Claims searched completely: 2-11,13-15 Claims searched incompletely: 1,12 Claims not searched: Reason for the limitation of the search:</p> <p>Which is largely due to the extensive disclaimer part of the claims.</p>			
Place of search THE HAGUE		Date of completion of the search 26-03-1990	Examiner VAN BIJLEN
CATEGORY OF CITED DOCUMENTS			
X : particularly relevant if taken alone Y : particularly relevant if combined with another document of the same category A : technological background O : non-written disclosure P : intermediate document		T : theory or principle underlying the invention E : earlier patent document, but published on, or after the filing date D : document cited in the application L : document cited for other reasons & : member of the same patent family, corresponding document
